FutureMe Lab

A visual guide to using the app

Actual app screenshots
Numbered instructions
All main views and mission flows

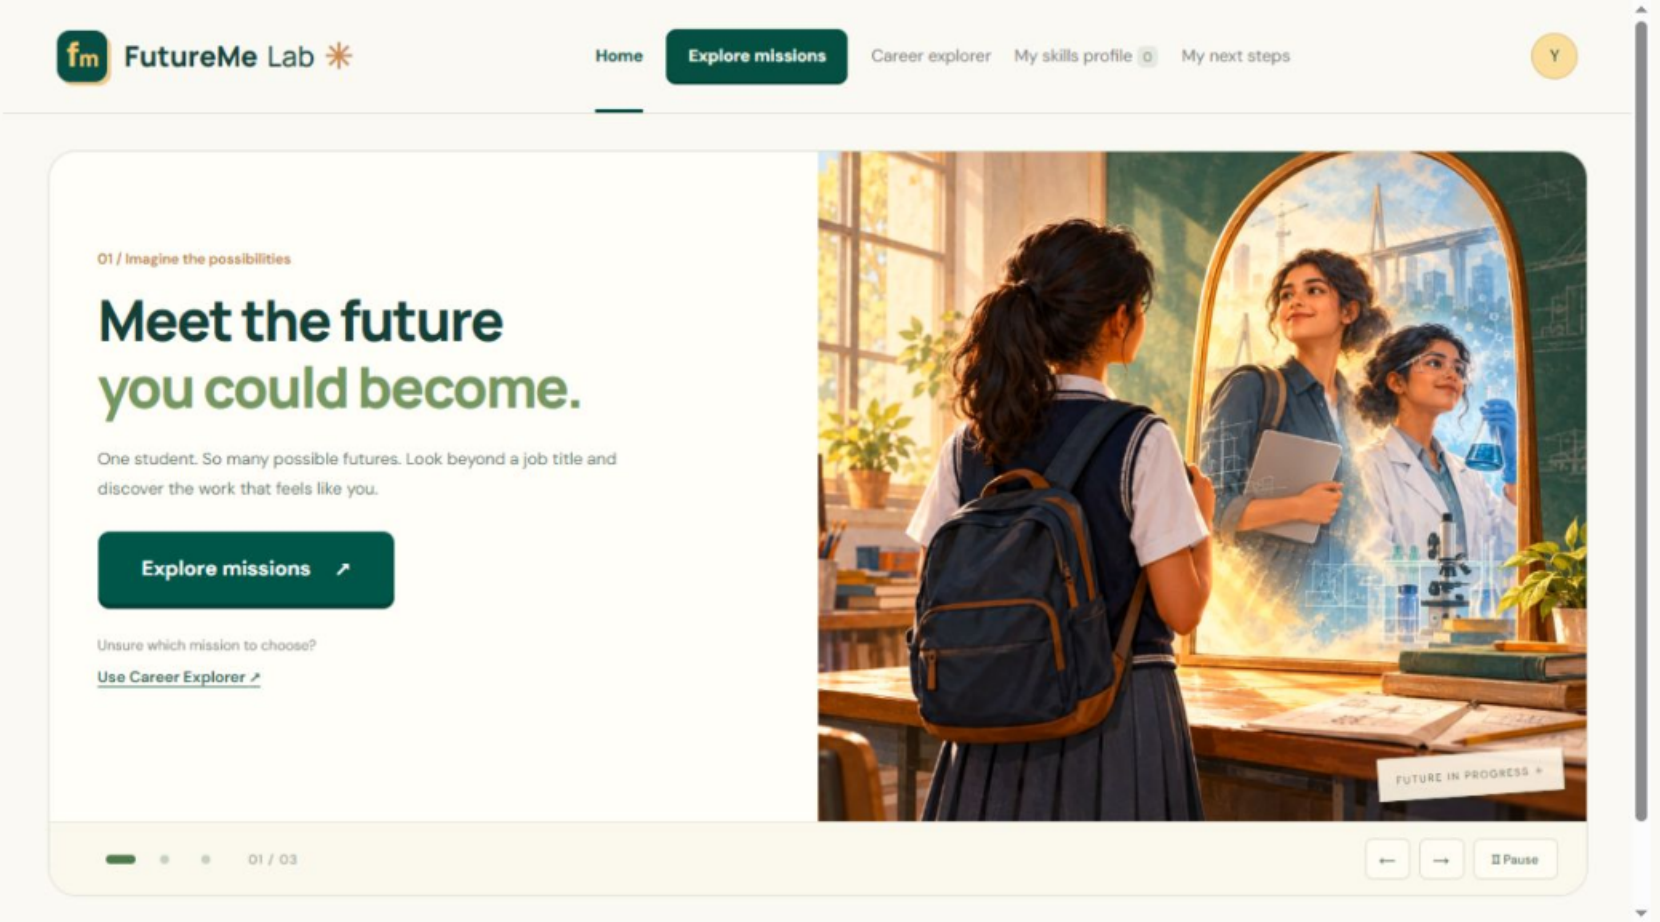

Screenshots use a separate demo session with sample responses.

Start with Explore missions

1. Open FutureMe Lab.

2. Select the large Explore missions button to browse the career lab.

3. If you are unsure where to start, select Use Career Explorer.

Home contains the carousel. Other sections open only when you select them.

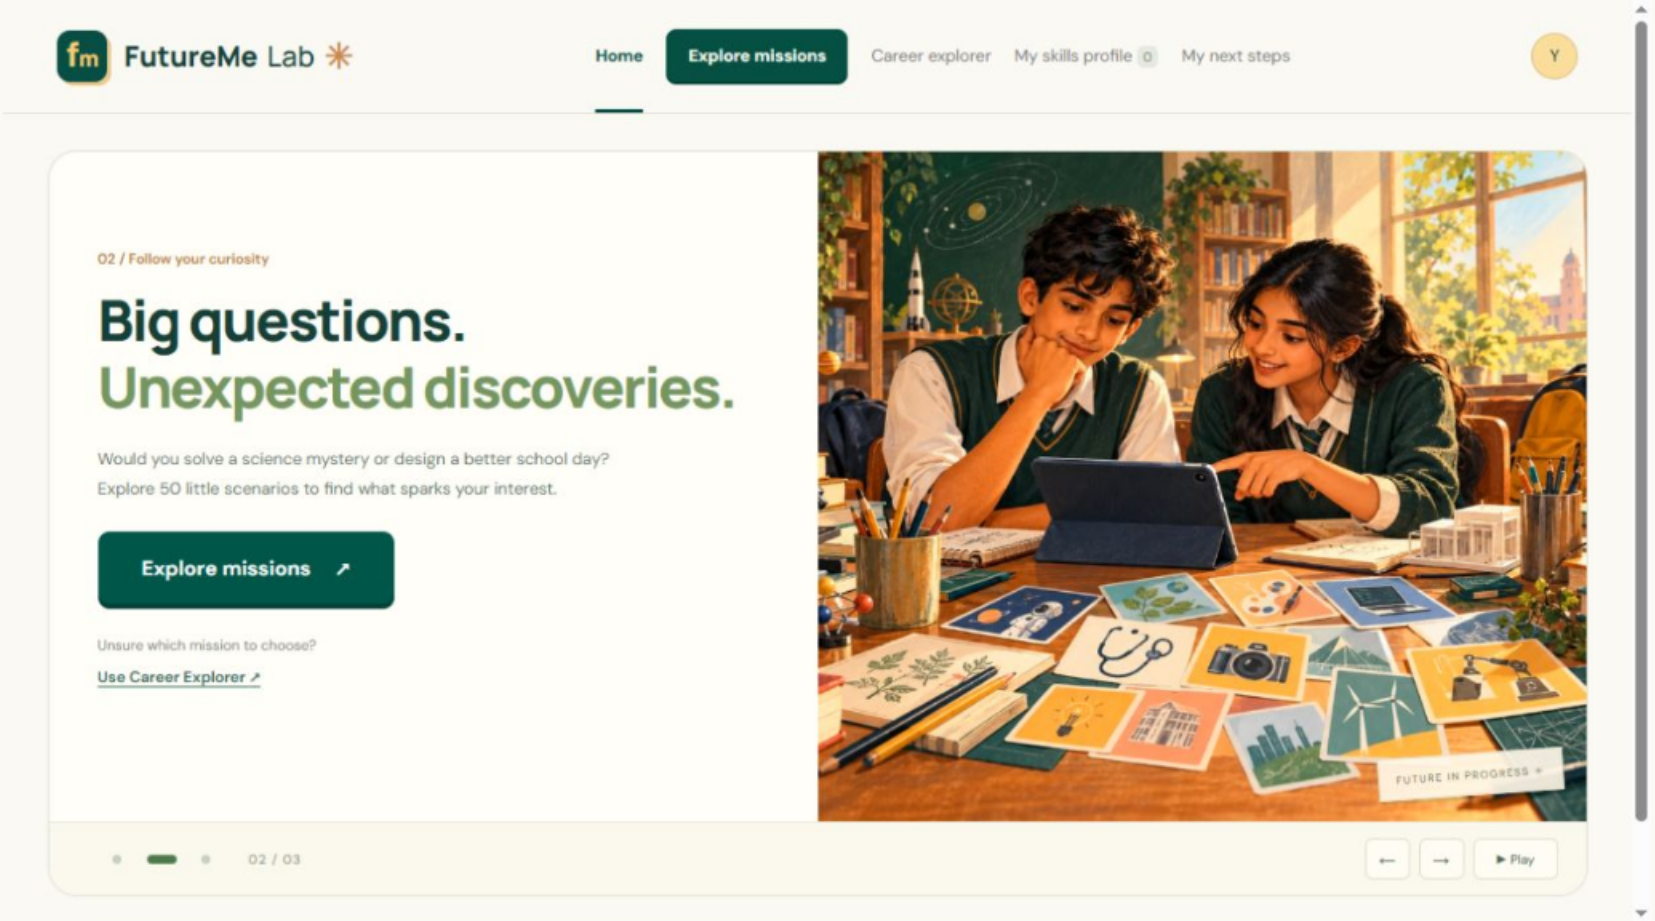

Move between carousel scenes

1. Select a dot or an arrow below the image.

2. Use Pause to stop automatic rotation. Use Play to resume it.

3. Explore missions remains the main action on every scene.

Keyboard users can use the left and right arrows inside the carousel.

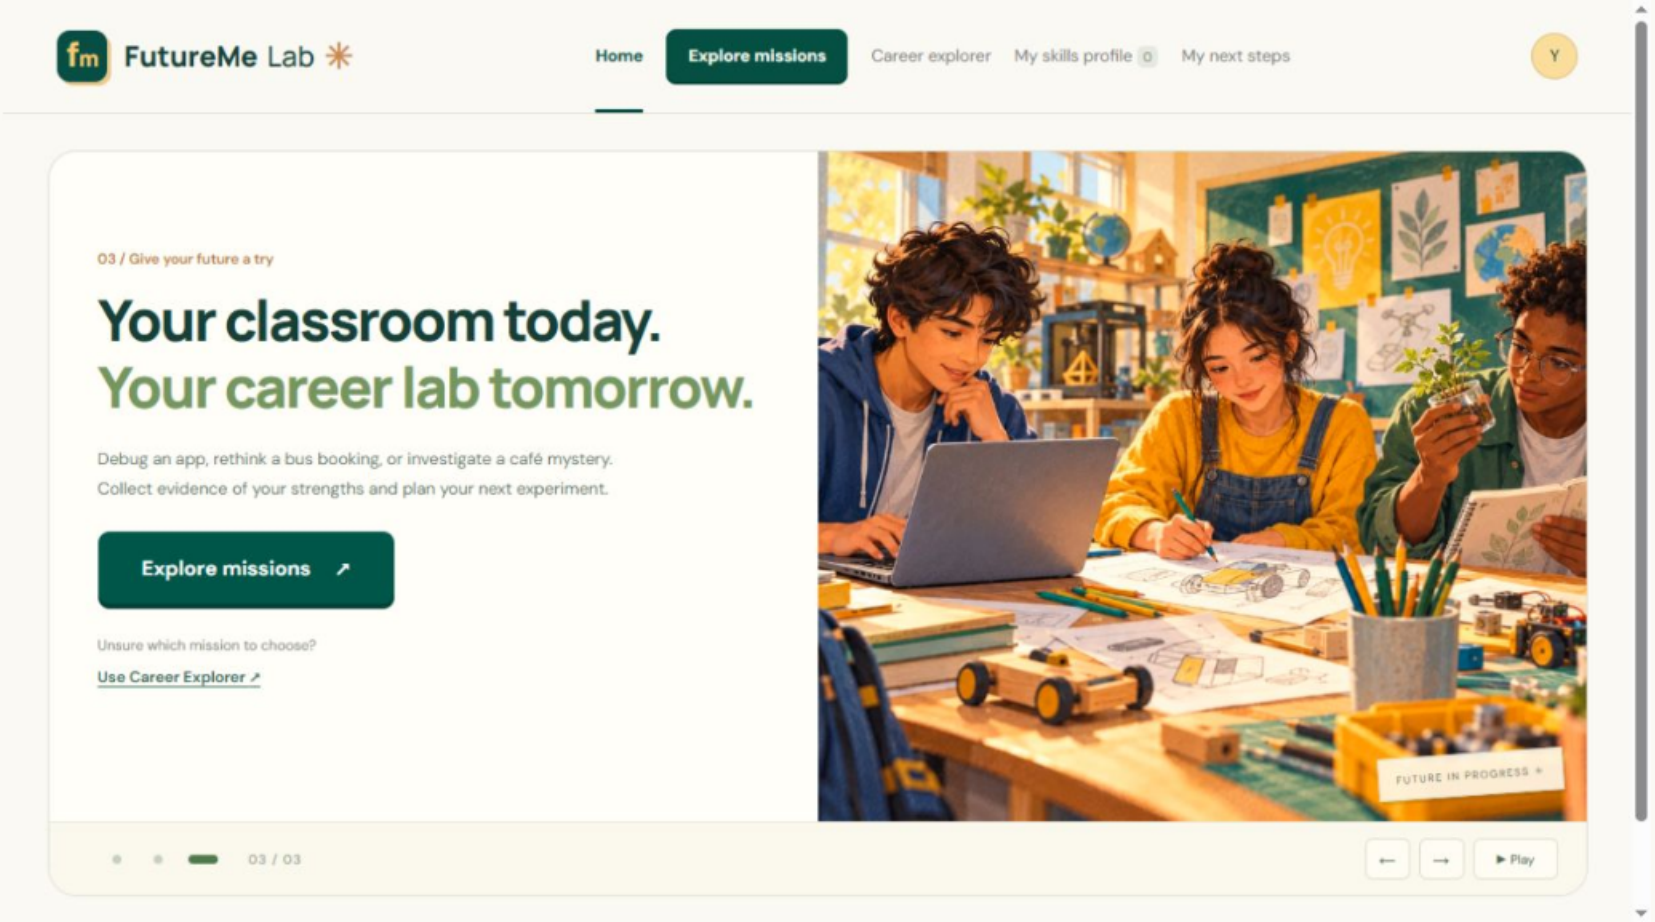

Return to the home screen

1. Select Home in the top navigation.

2. You can also select the FutureMe Lab logo.

3. Use the browser Back and Forward buttons to revisit app views.

The carousel stays on Home. It does not appear inside the mission or profile views.

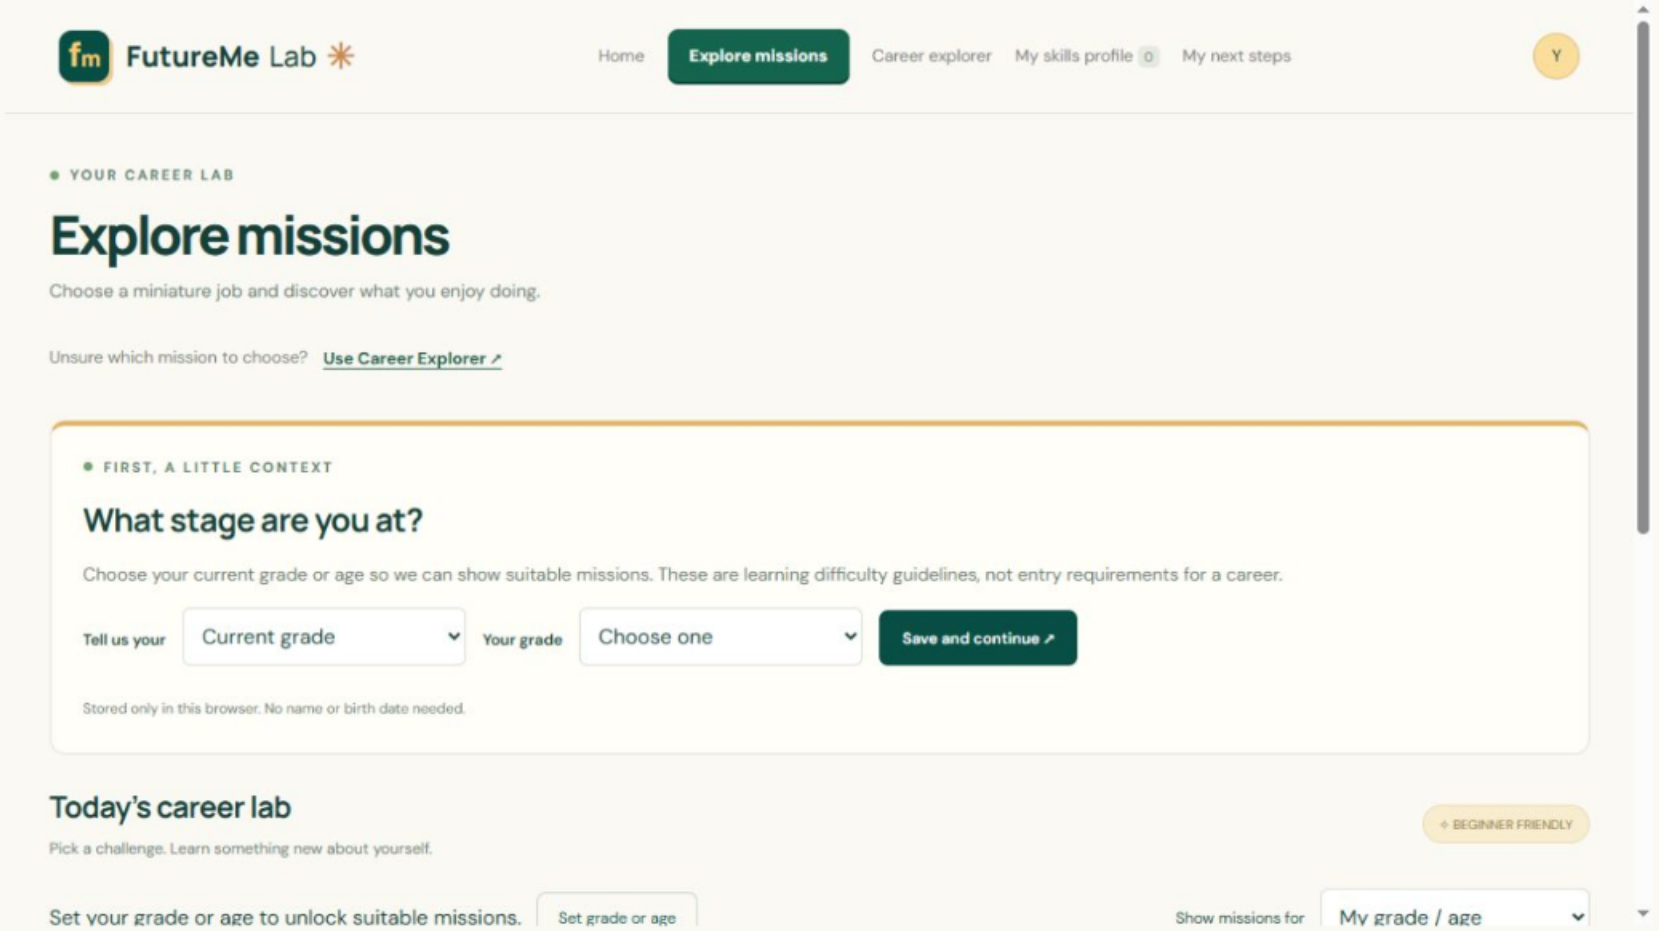

Choose your current grade

1. Open Explore missions.

2. Under Tell us your, choose Current grade and select your grade.

3. Select Save and continue.

Your grade sets the mission learning level. It does not determine your future career.

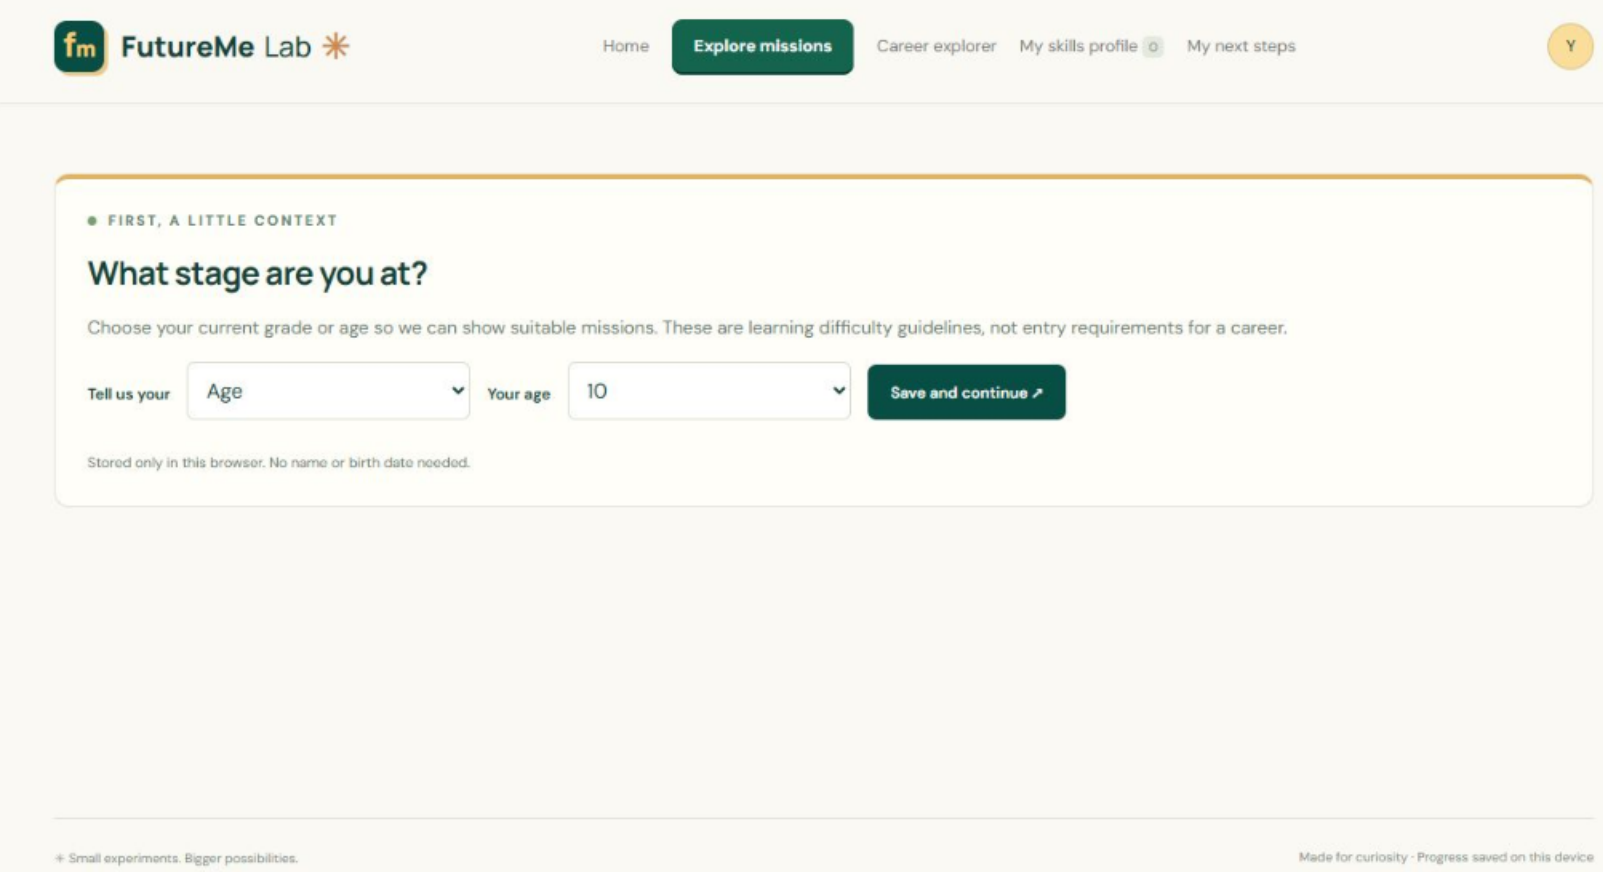

Use age instead of grade

1. Select Change grade / age.

2. Choose Age, then select your current age.

3. Select Save and continue to update your eligible missions.

Use either grade or age. The app does not ask for a date of birth.

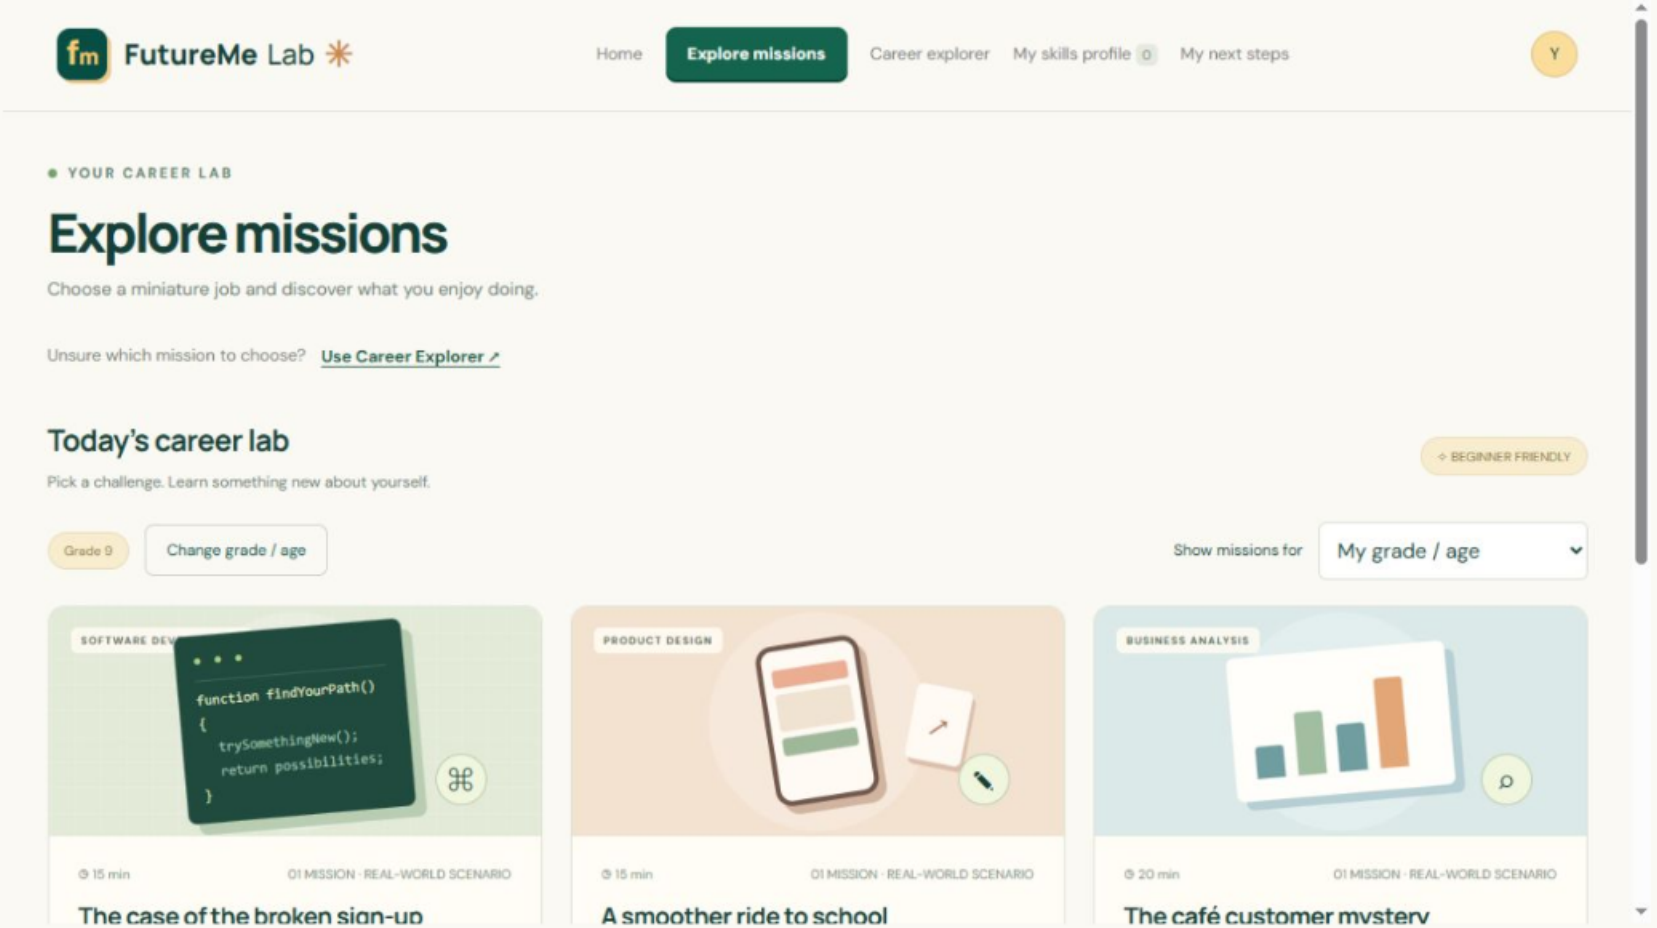

Browse your career lab

1. Read the mission titles and descriptions.

2. Check the learning level and expected time.

3. Scroll down to find the start button on each card.

The default My grade / age filter uses your saved details.

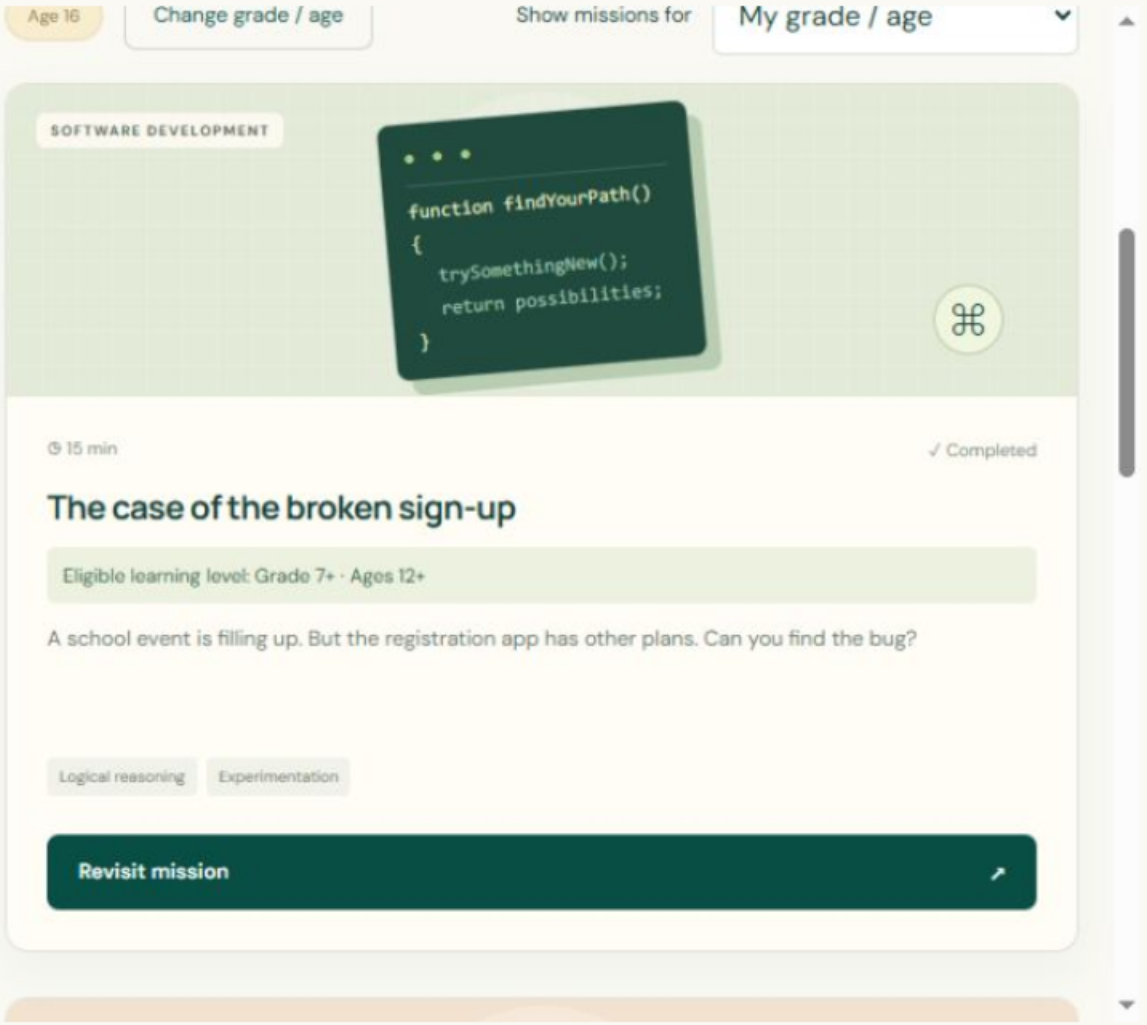

Open a mission card

1. Look for the eligible grade and age label.

2. Select Try this career to begin.

3. Later, Continue mission resumes a draft and Revisit mission opens it again.

Submitting a repeated mission replaces its earlier result in your profile.

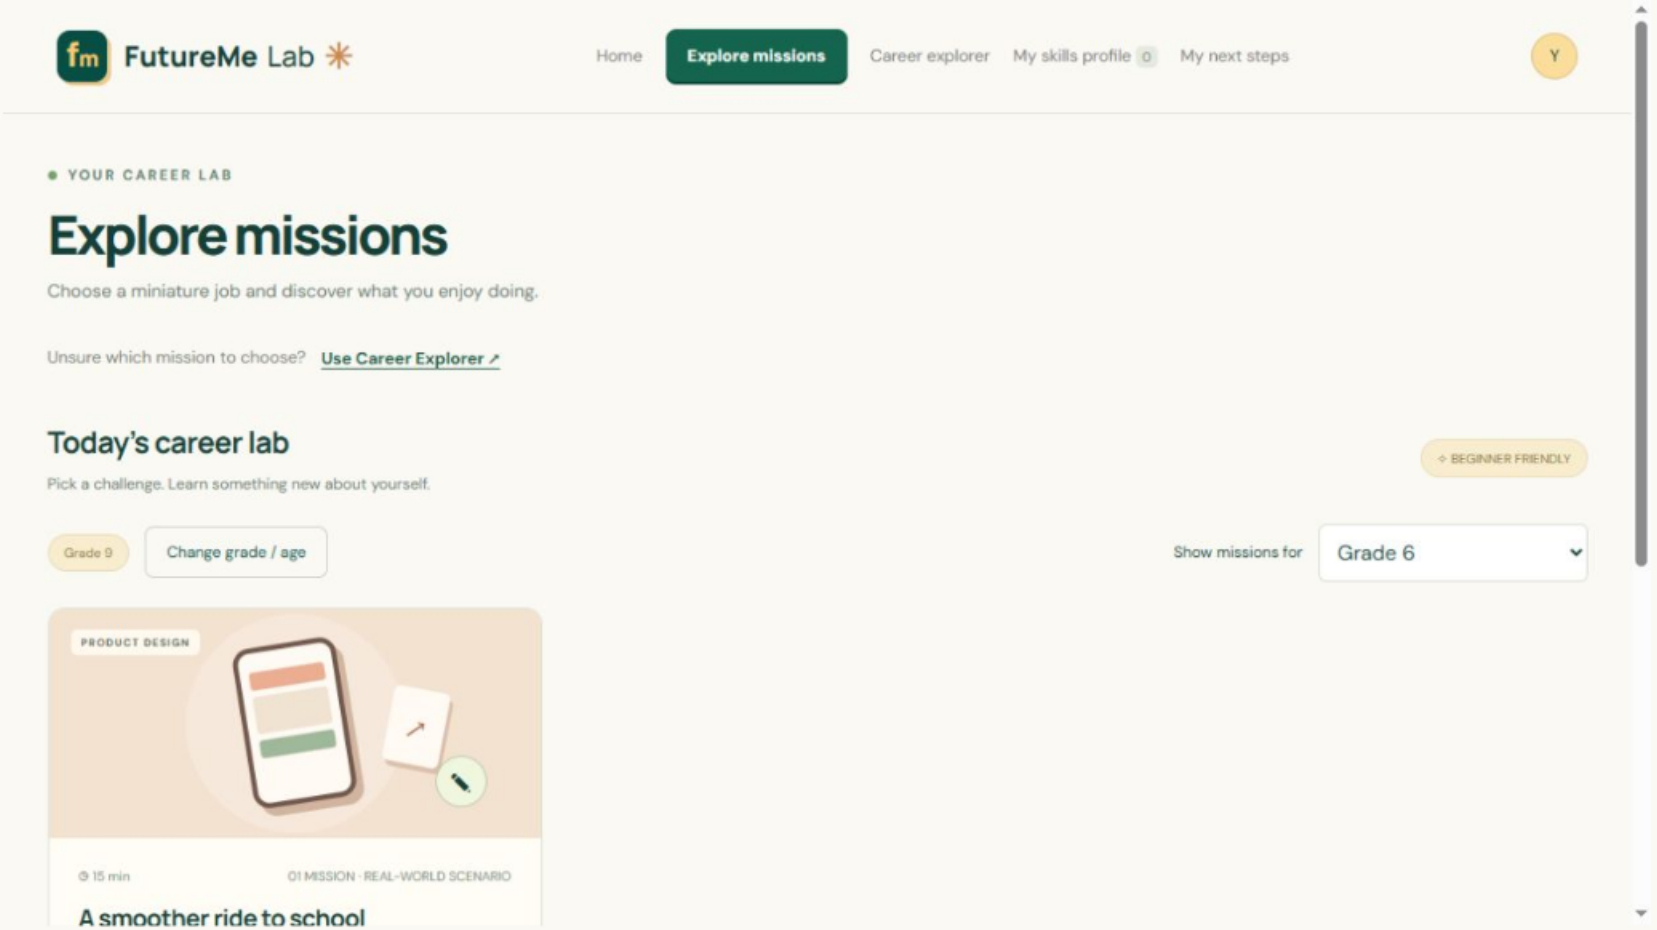

Filter missions by grade

1. Open Show missions for.

2. Choose a grade to browse its learning level.

3. Choose My grade / age to return to your own recommendations.

Browsing another grade does not change your saved details or unlock an ineligible mission.

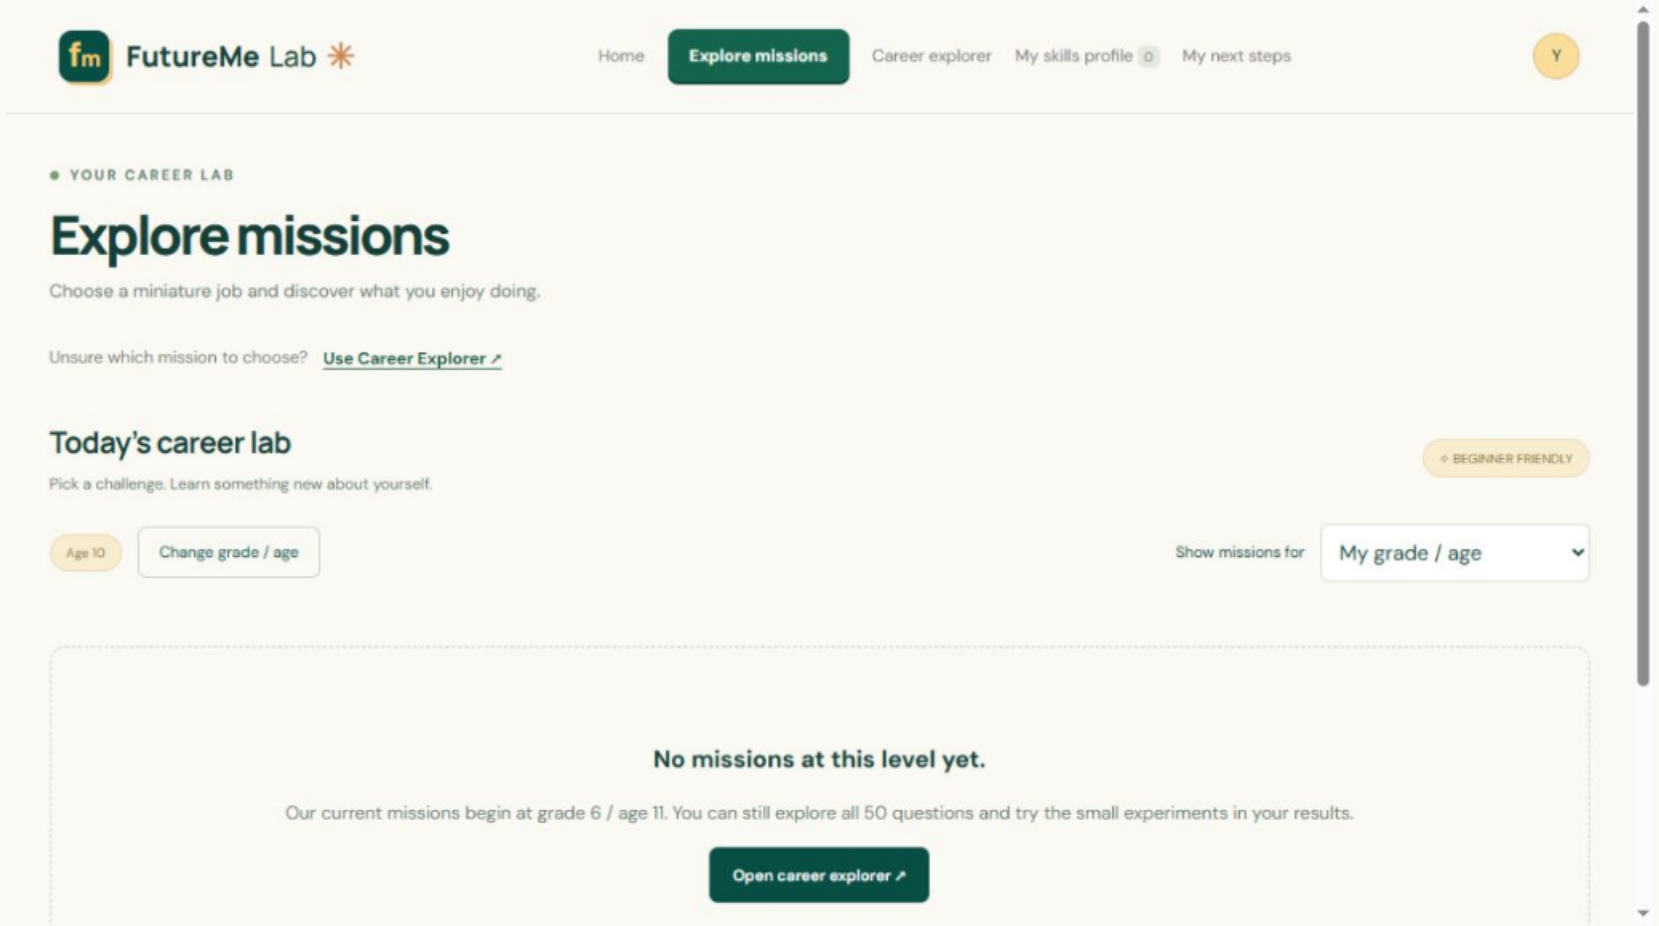

Understand an empty mission list

1. Check that your grade or age is correct.

2. Current missions begin at grade 6 or age 11.

3. You can still open Career Explorer and try its suggested small experiments.

The age-10 example shown here uses demonstration data.

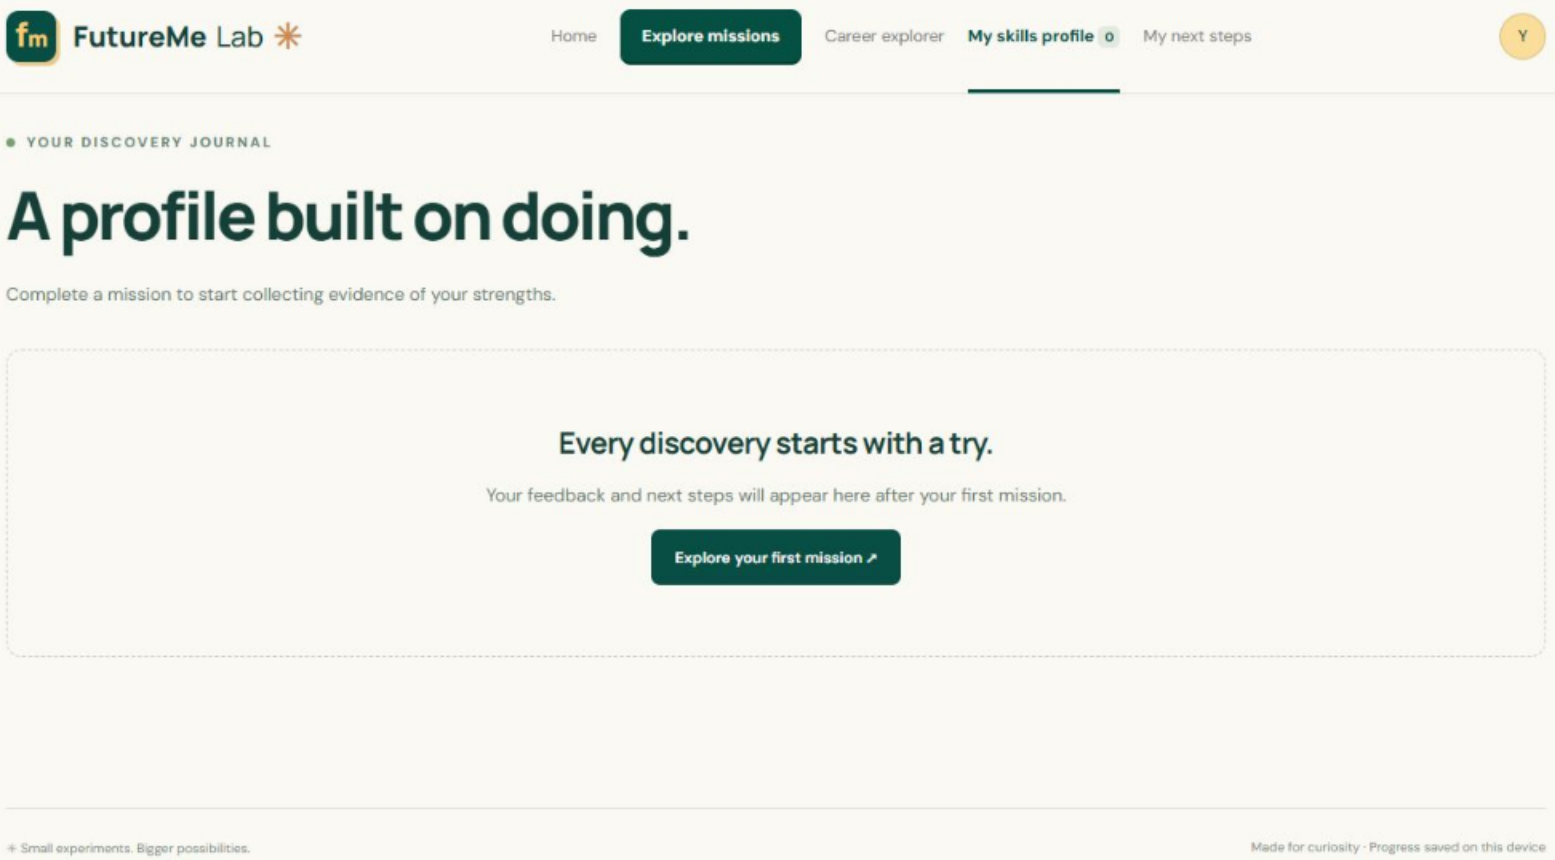

An empty skills profile is normal

1. Open My skills profile.

2. If you have not submitted a mission, the profile is empty.

3. Select Explore your first mission to start collecting evidence.

Questionnaire answers alone do not create demonstrated mission skills.

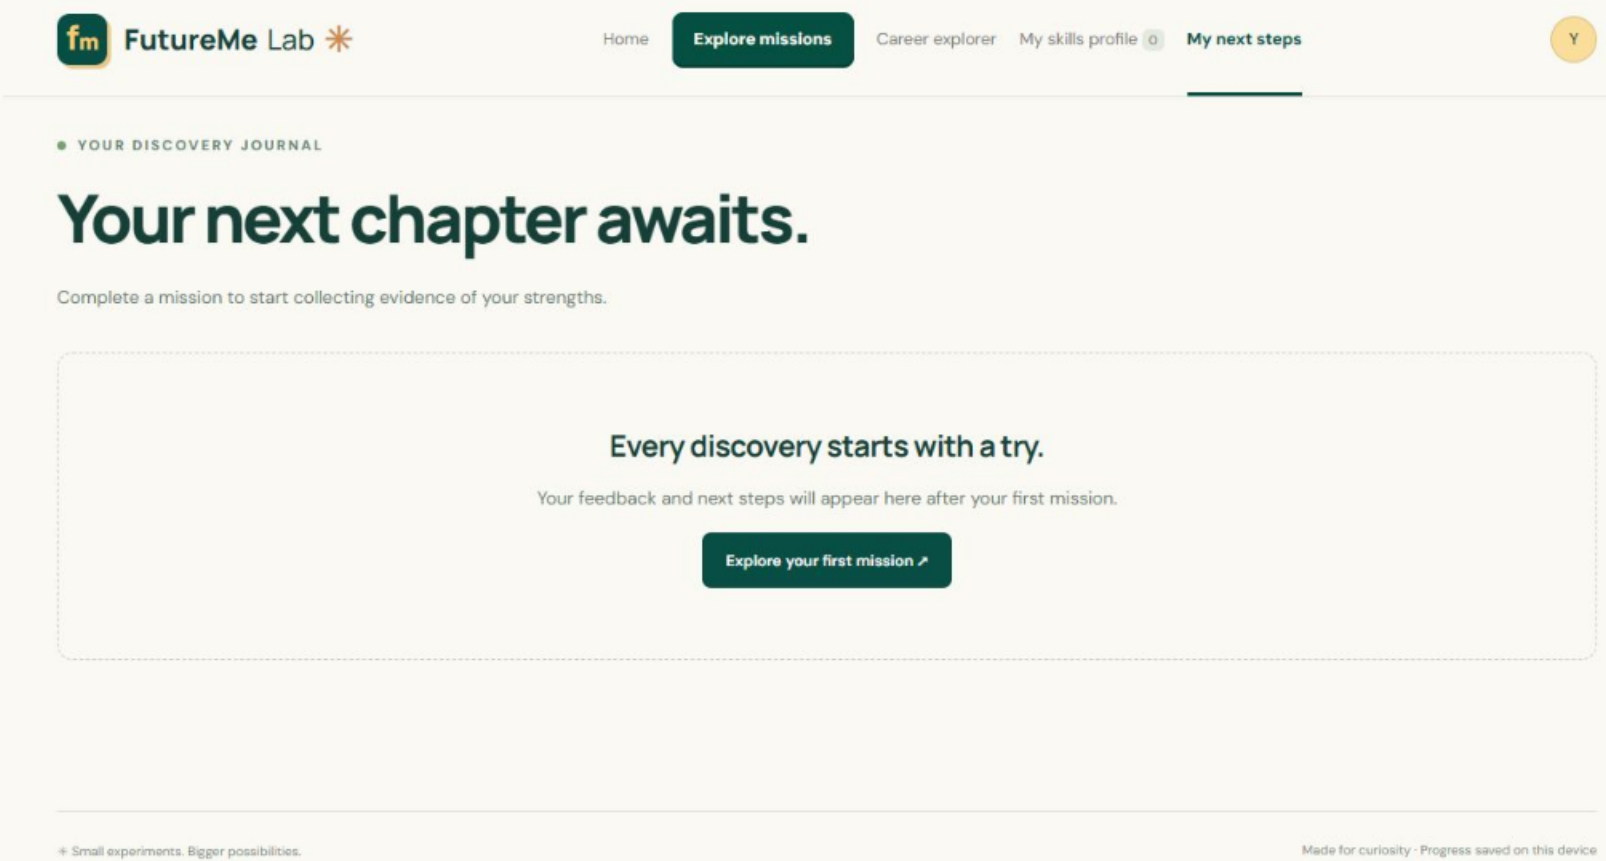

Next steps appear after a mission

1. Open My next steps.

2. Complete and submit a mission if no plan appears yet.

3. Return here for practical follow-up experiments.

The mission-based plan uses completed missions and enjoyment ratings.

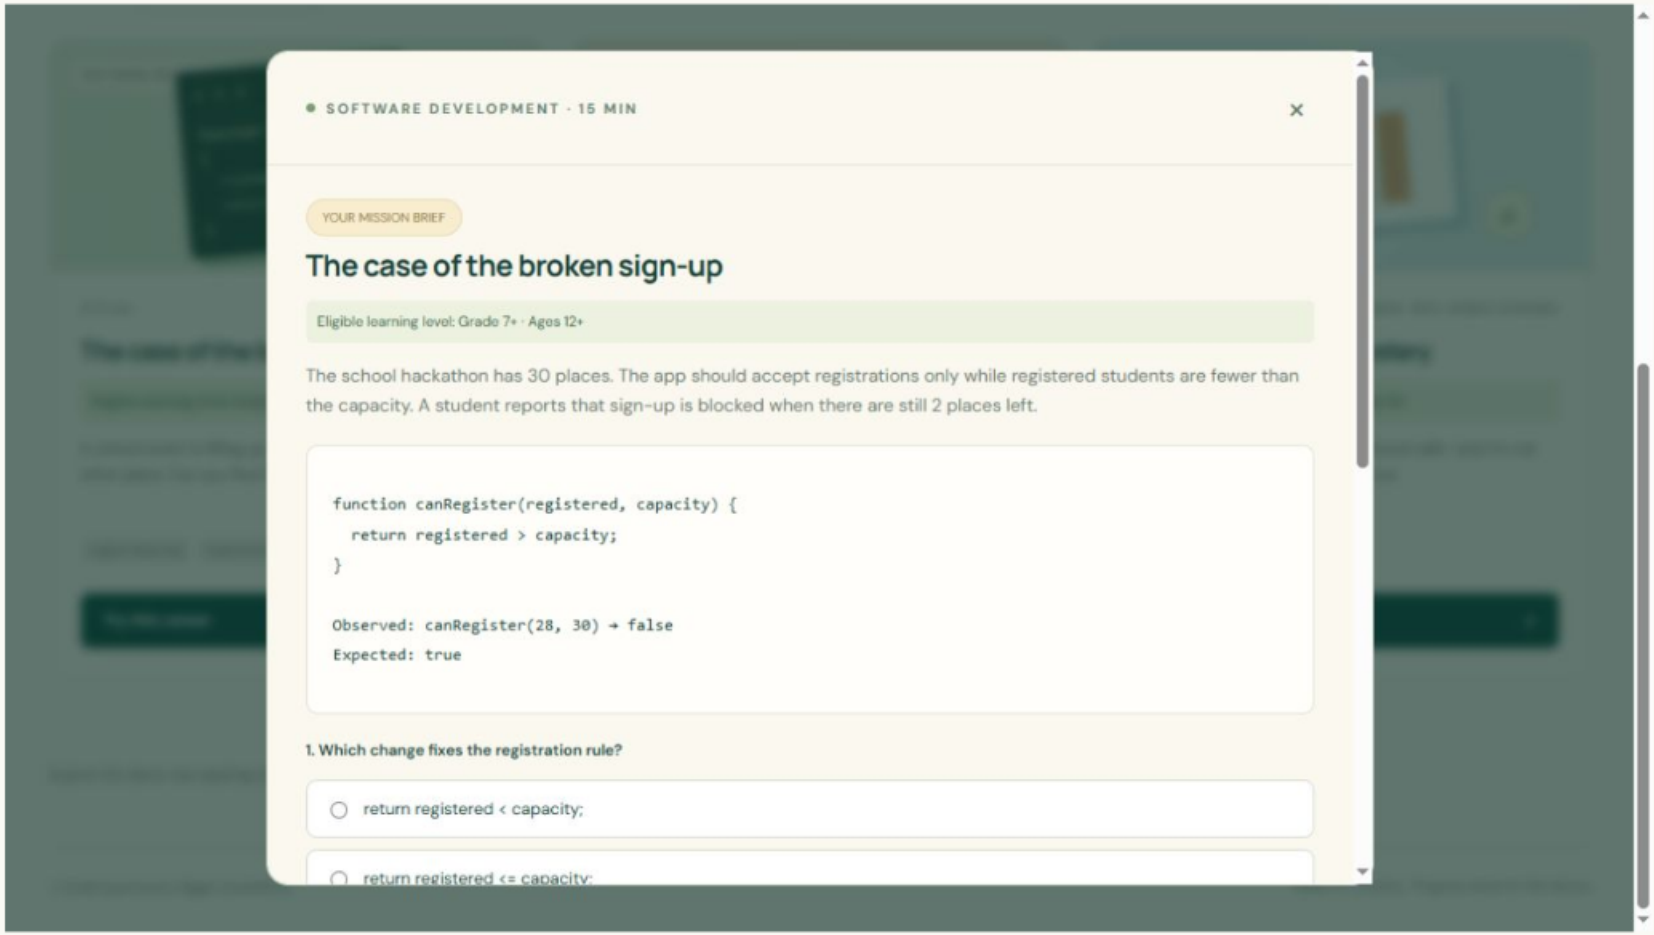

Read the brief and the evidence

1. Read the registration problem carefully.

2. Compare the observed and expected results.

3. Choose the rule you think solves the problem.

Use the close button to leave the mission. Draft answers save when storage is available.

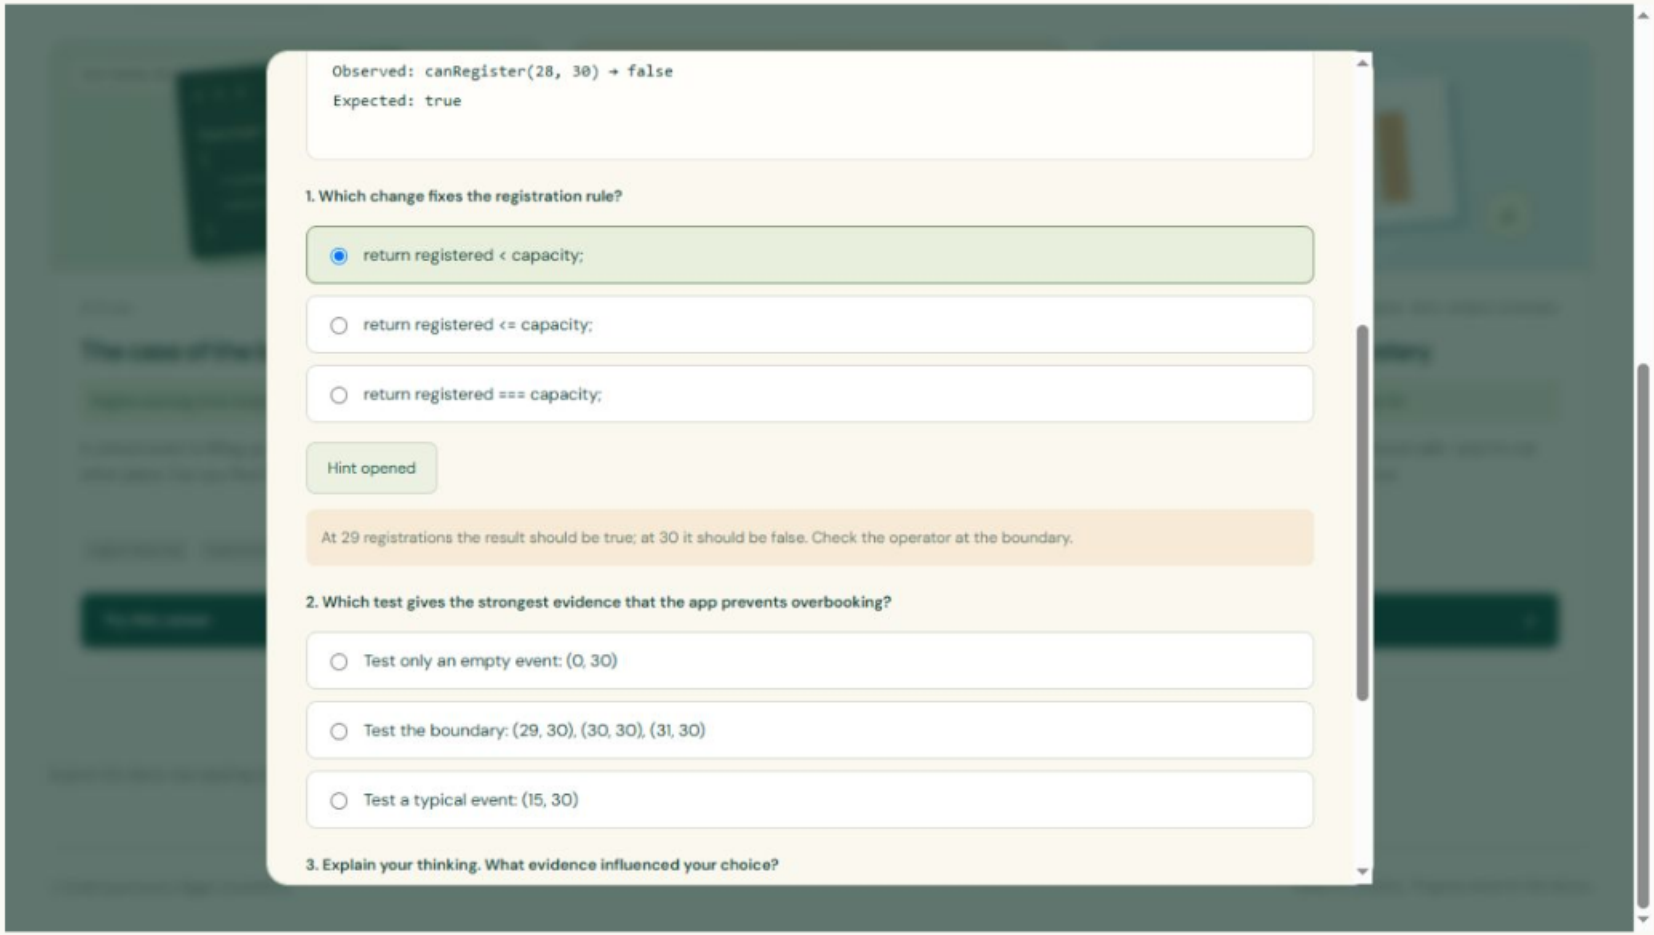

Ask for a hint when needed

1. Select Need a hint? if you want support.

2. Read the hint before deciding.

3. Choose a test that would check your solution.

Hint use appears in feedback. The app treats it as support, not automatic failure.

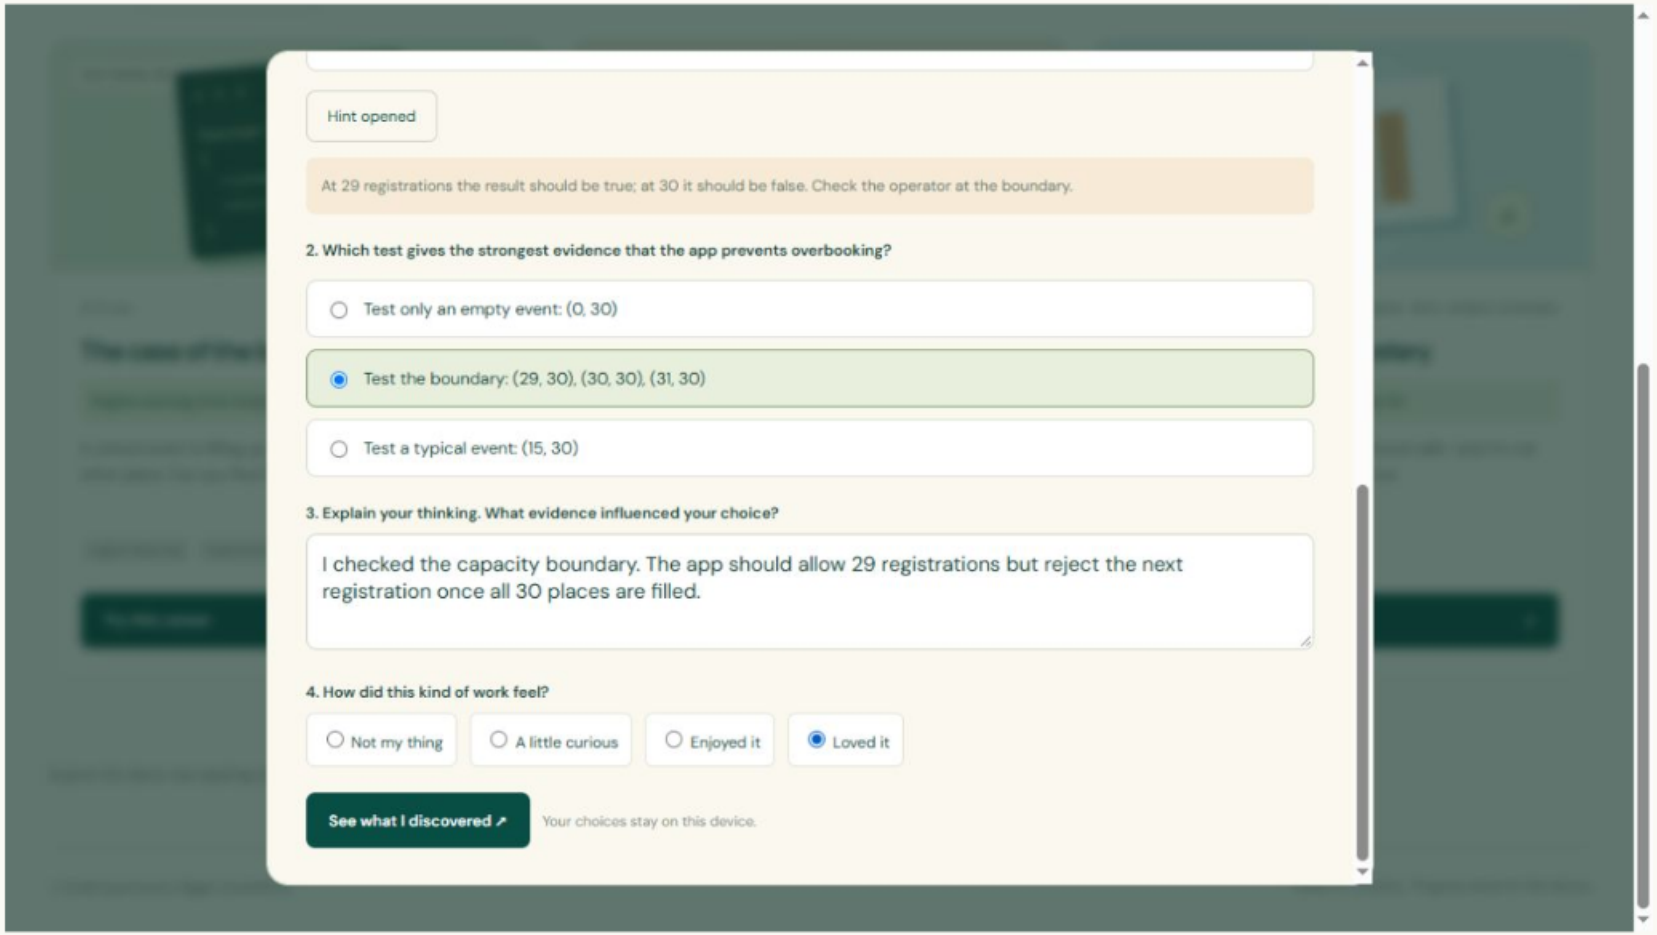

Explain your thinking

1. Complete both multiple-choice questions.

2. Write at least 20 characters explaining your reasoning.

3. Rate your enjoyment and select See what I discovered.

The response in this screenshot is an example. Write your own reasoning.

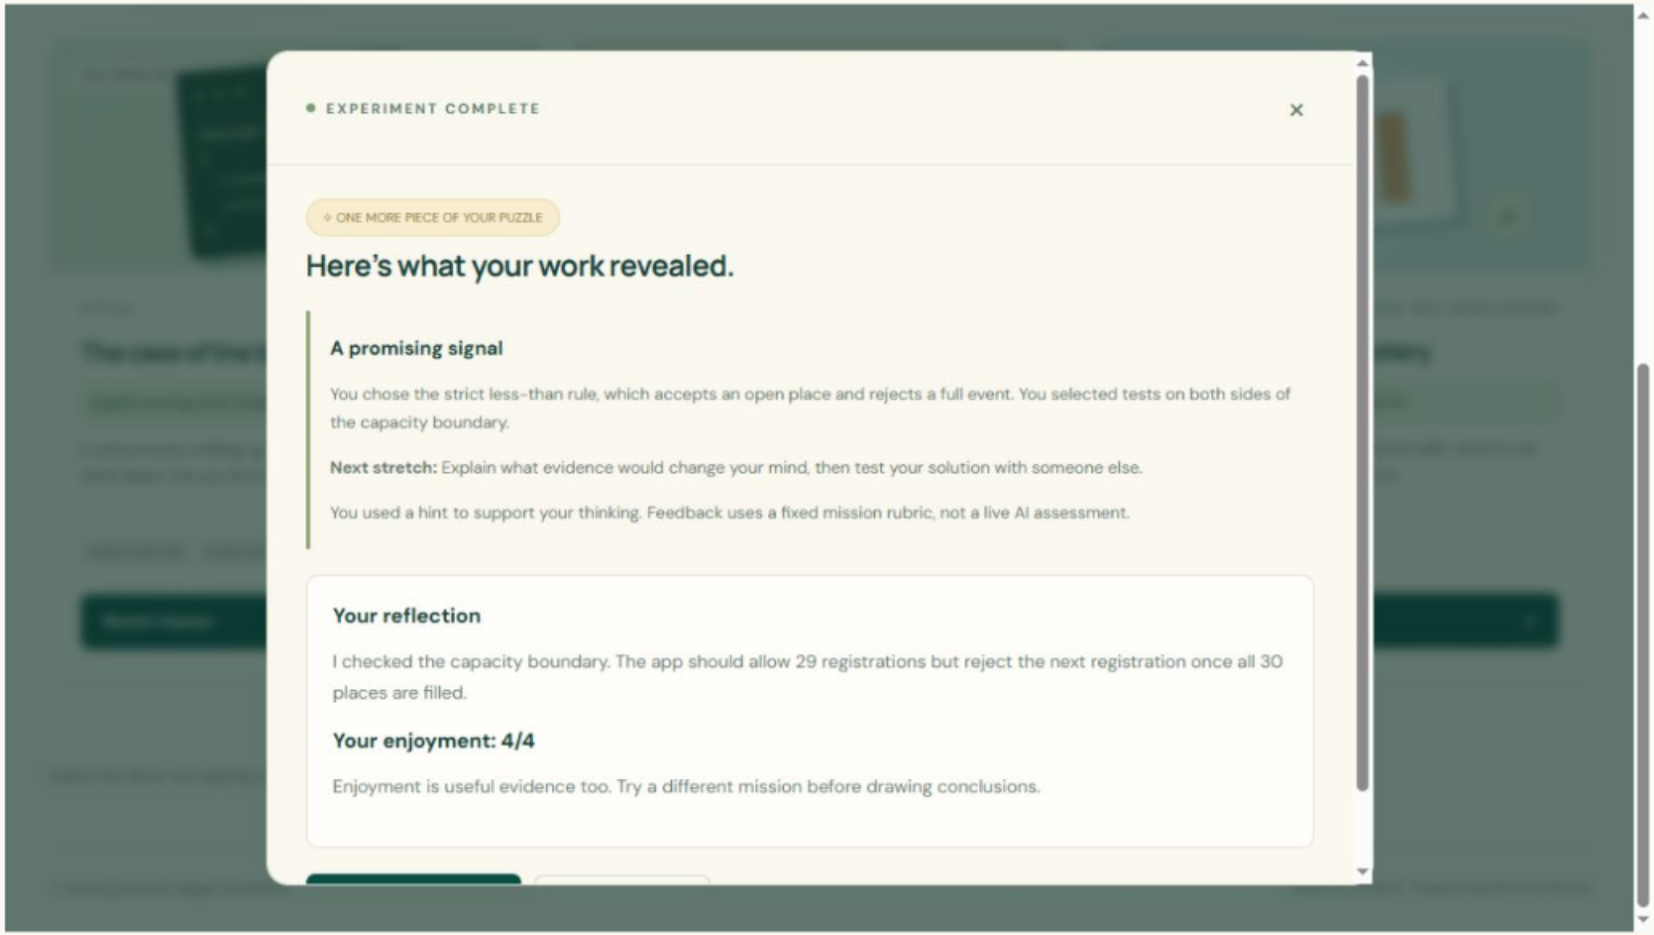

Read your mission feedback

1. Read the evidence linked to your choices.

2. Find the Next stretch suggestion.

3. Open your skills profile or try another career.

Current feedback follows authored rubrics. It is not a live AI assessment.

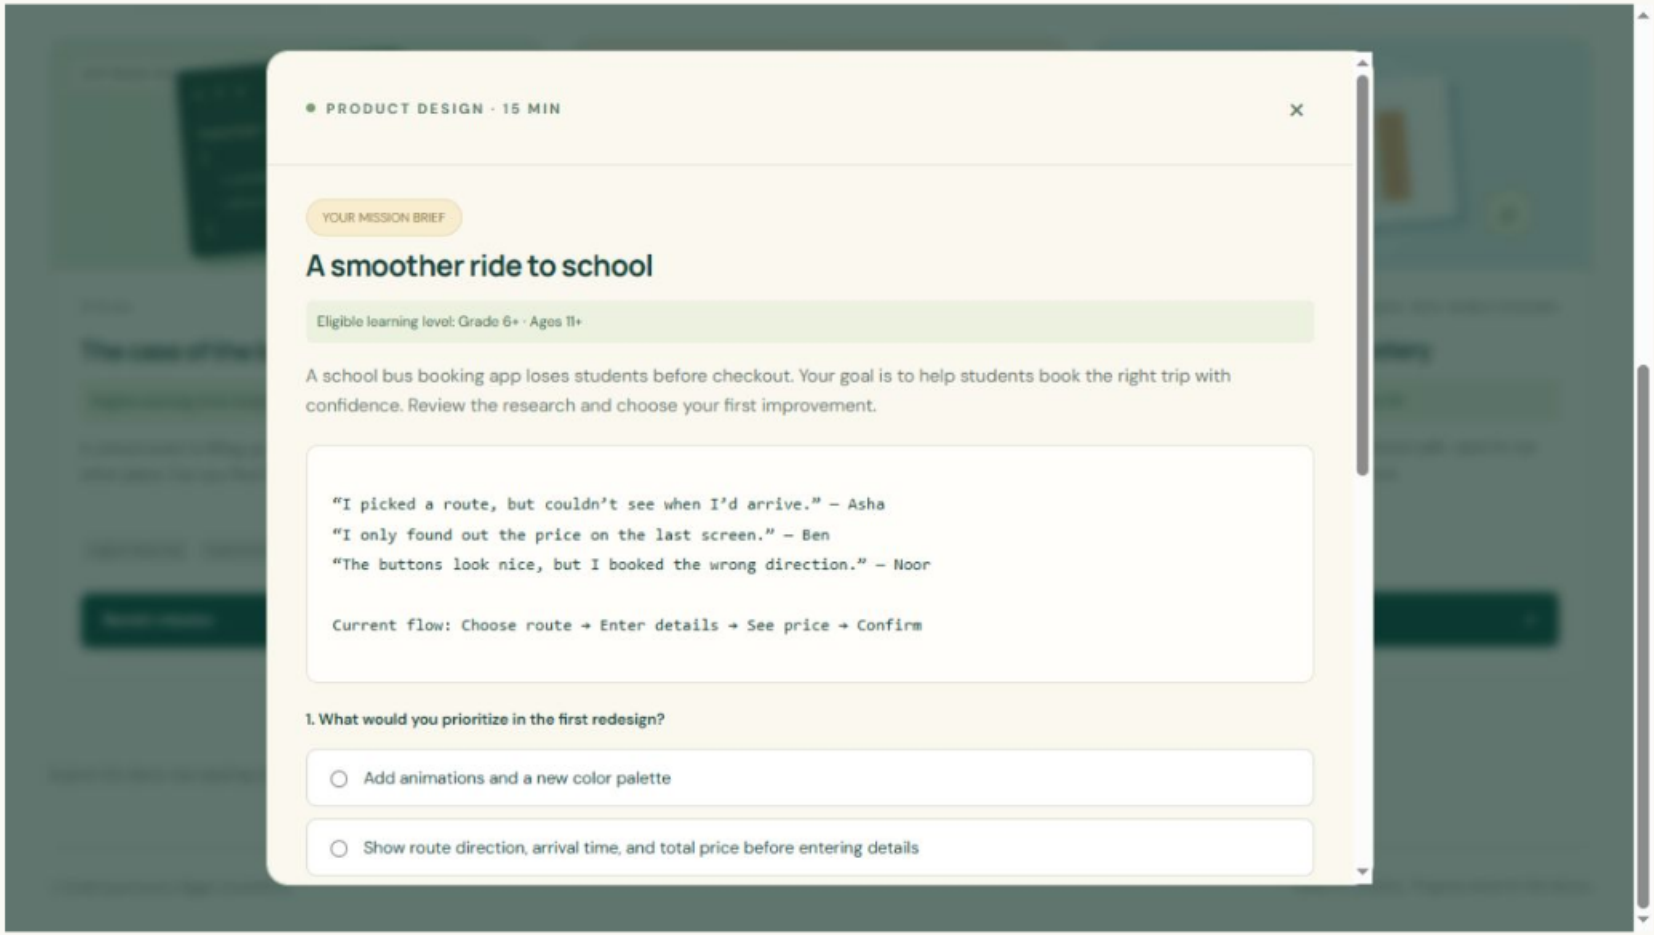

Investigate a confusing experience

1. Read the student quotes about bus booking.

2. Decide what the first redesign should prioritize.

3. Choose how you would check whether it helps.

This mission explores user-centered thinking.

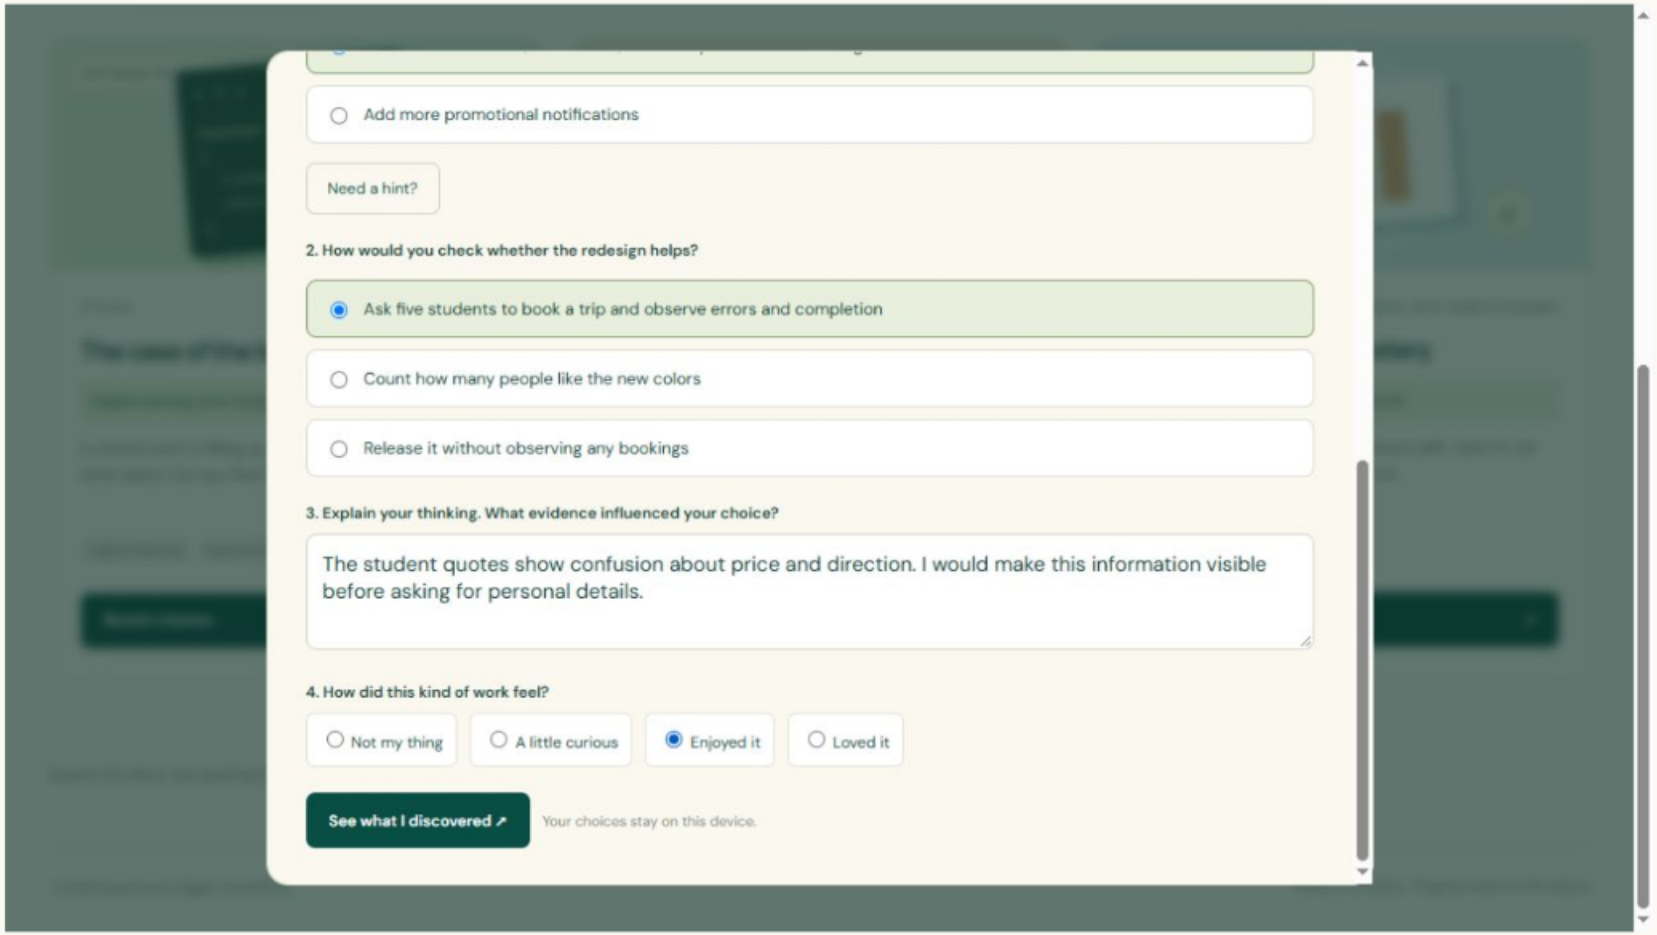

Reflect on the design task

1. Connect your choice to the student research.

2. Explain why your proposed check would be useful.

3. Record enjoyment and submit the mission.

Enjoyment and performance are separate signals.

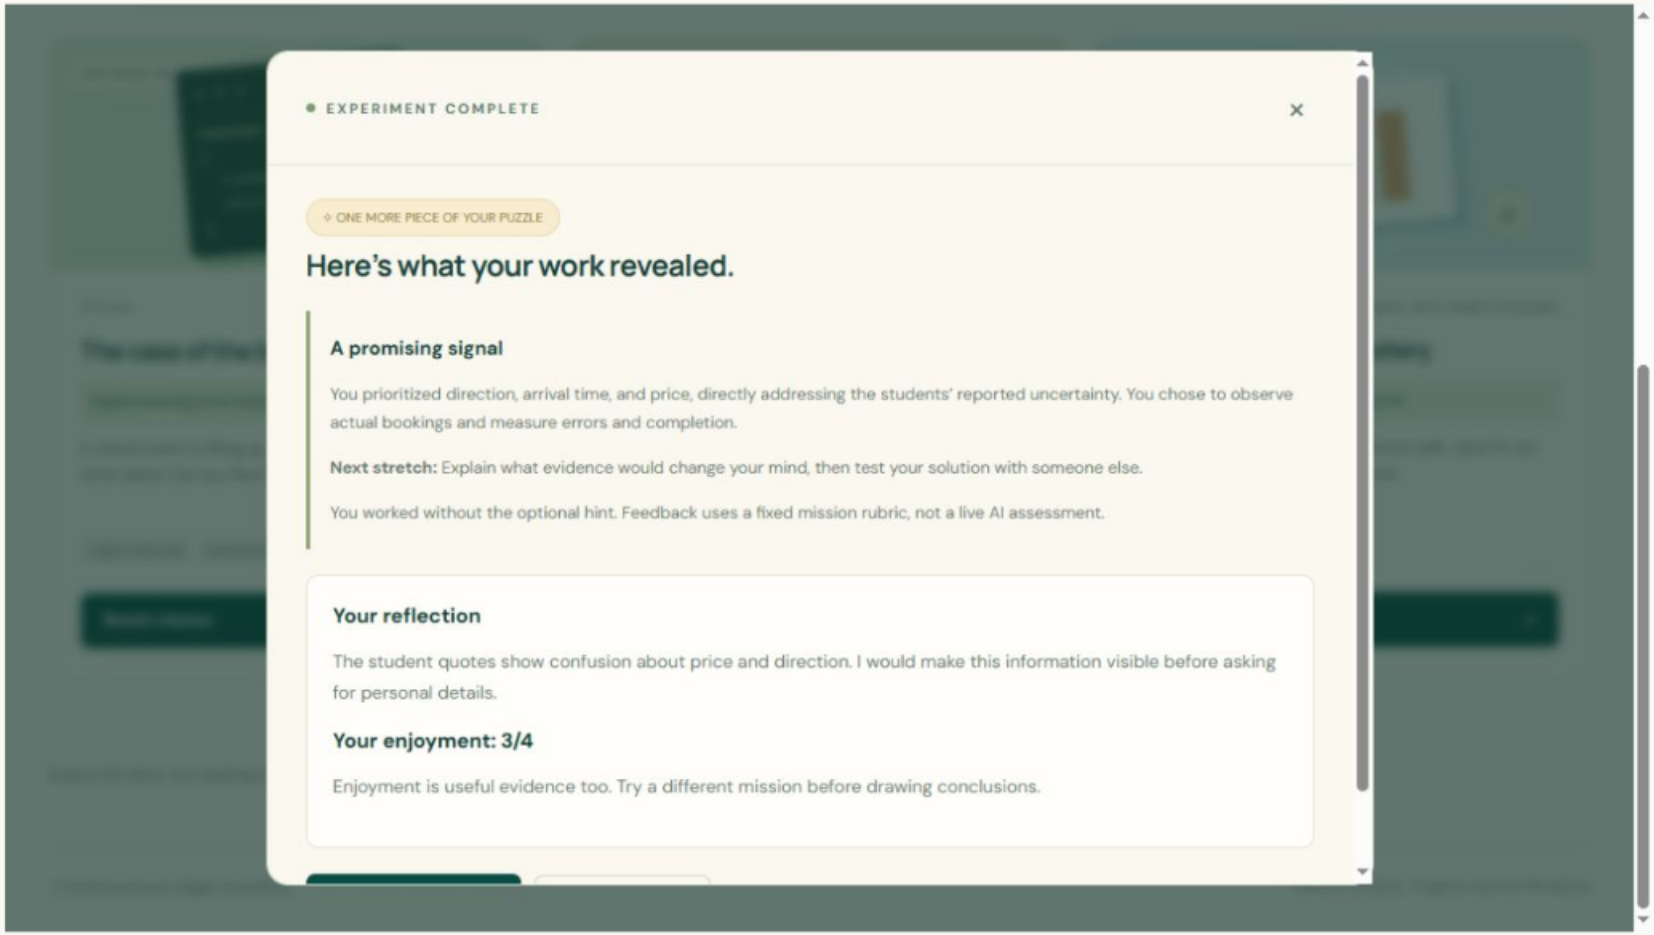

Use design feedback

1. Read which student needs your choices addressed.

2. Review the suggested next stretch.

3. Compare this work with the software mission.

A different enjoyment rating may suggest a different next experiment.

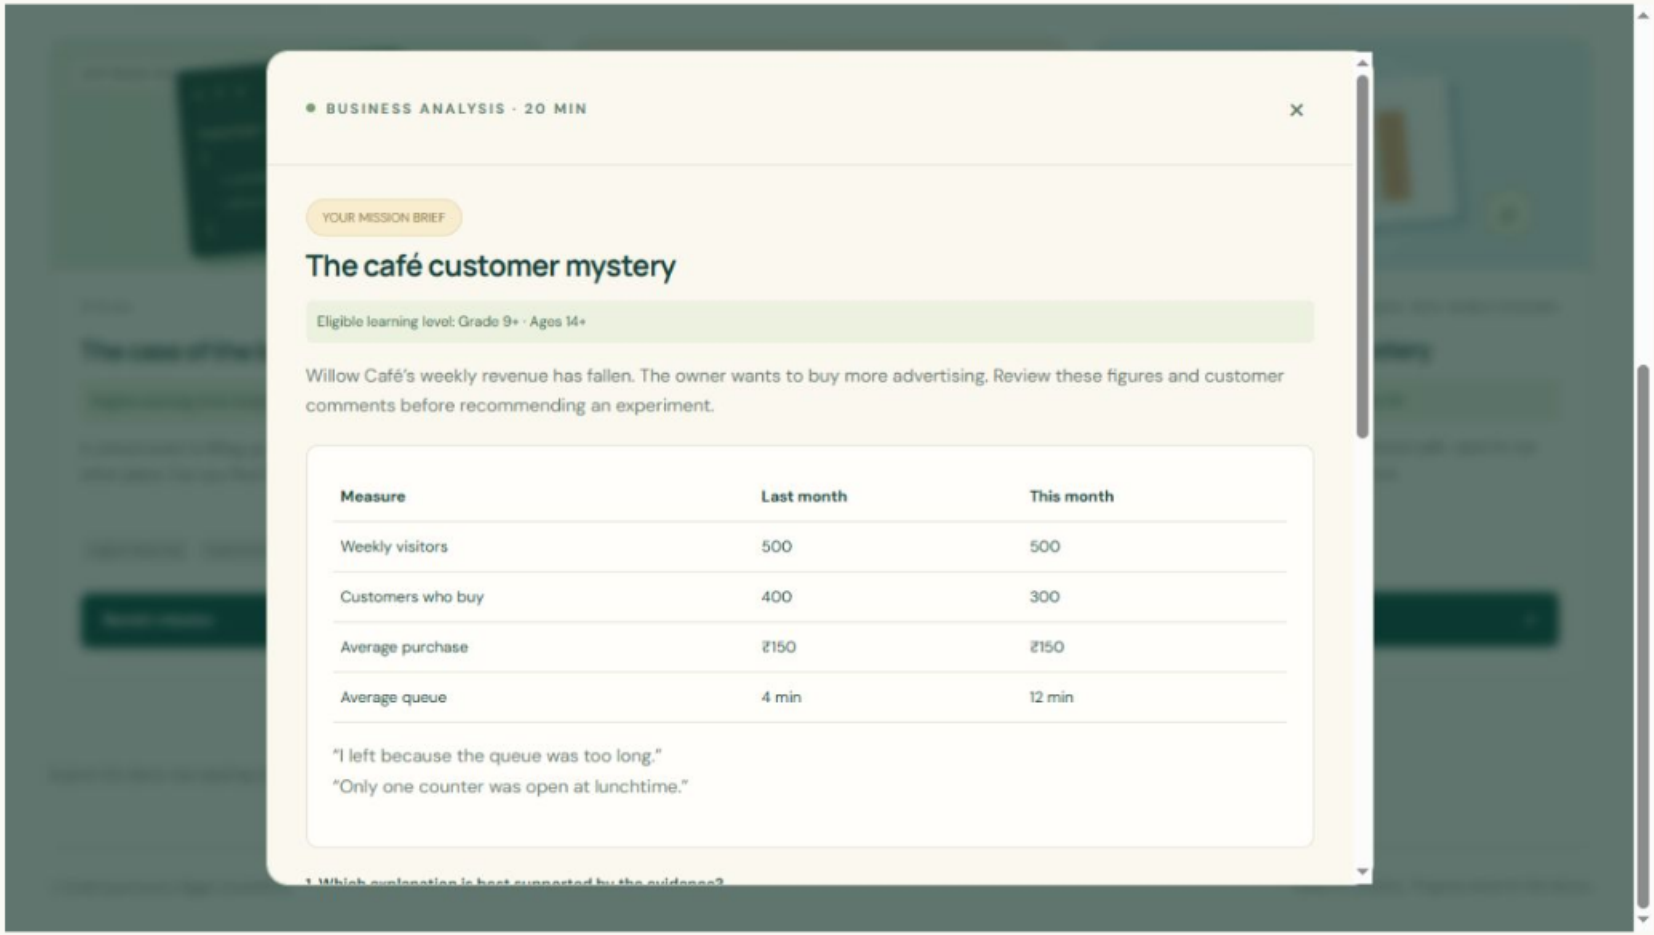

Follow the café evidence

1. Compare visitors, purchases, spending, and queue time.

2. Choose the explanation supported by those figures.

3. Select a small experiment before making a big change.

This mission explores evidence-based decisions.

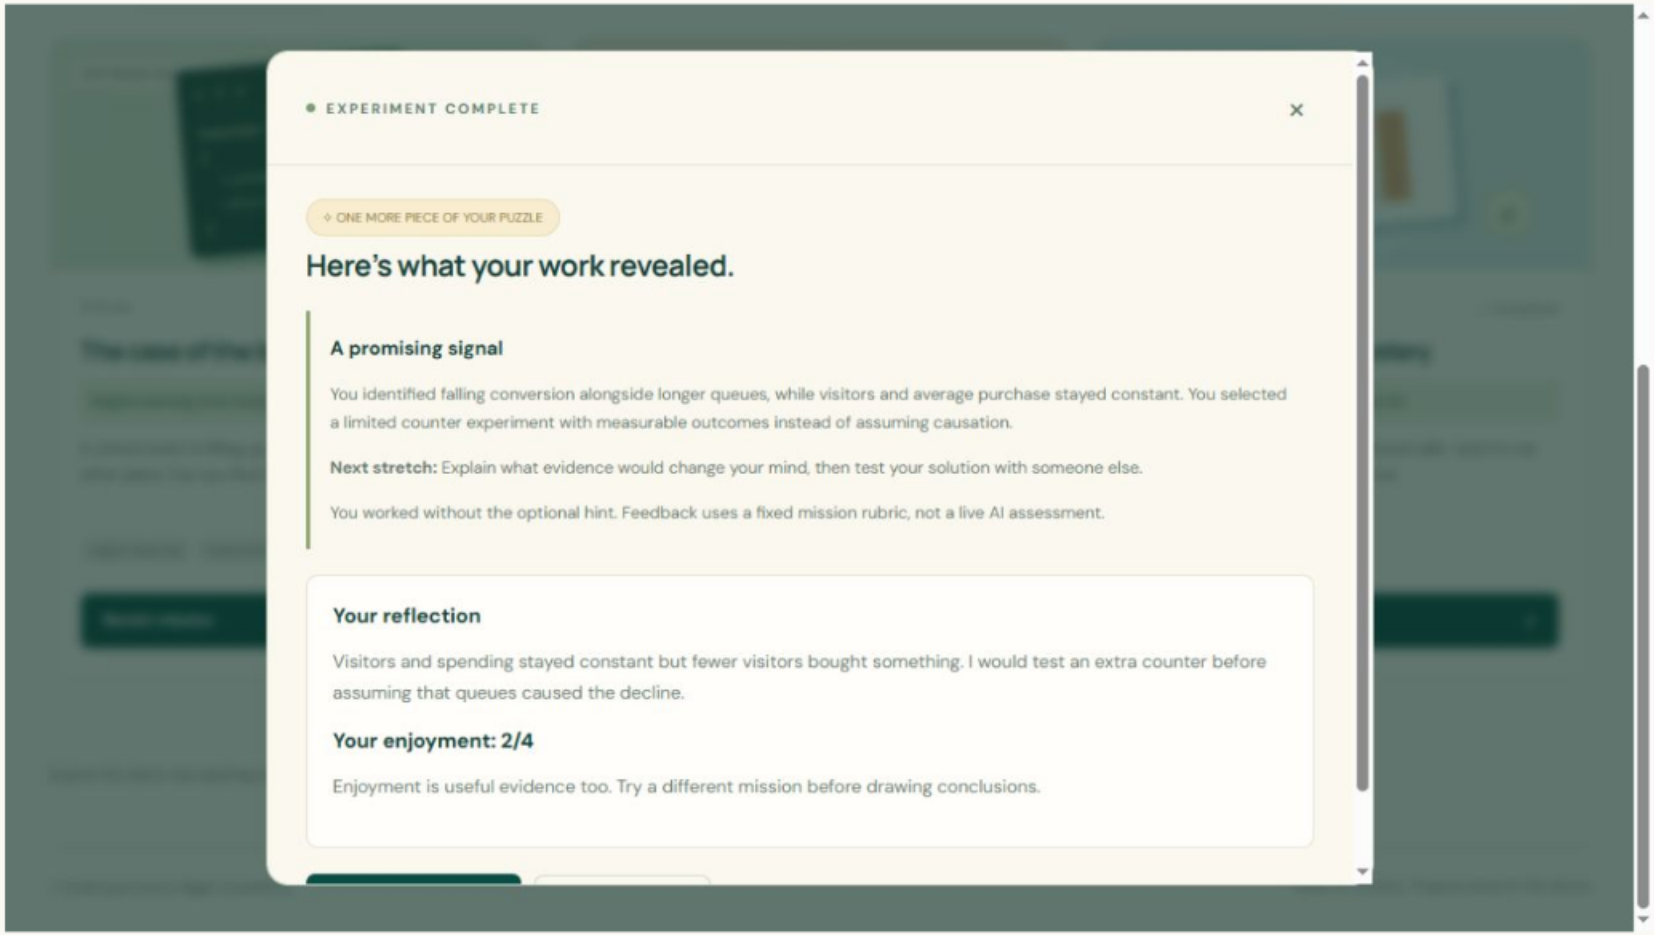

Review your analysis

1. Check which evidence your choices used.

2. Read the improvement or next-stretch suggestion.

3. Continue to your skills profile to compare missions.

Strong feedback on one task does not predict career success.

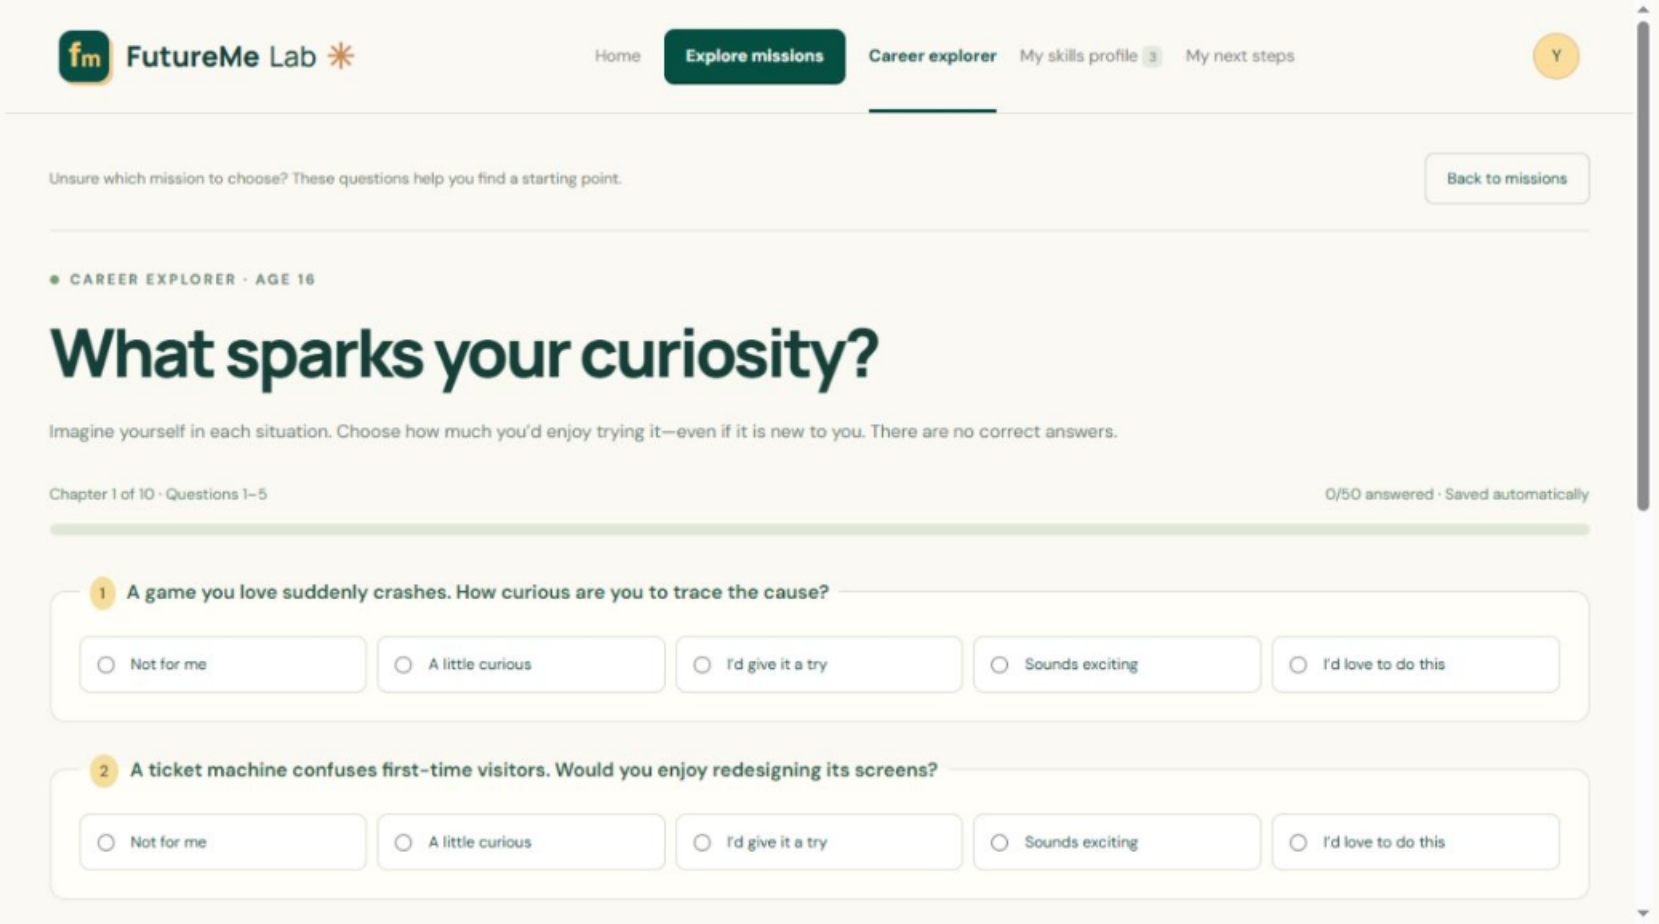

Use questions when you feel unsure

1. Open Use Career Explorer from Home or Missions.

2. Imagine trying each activity, even if it is new to you.

3. Choose an honest interest rating. There are no correct answers.

The explorer contains 50 questions across six career interest areas.

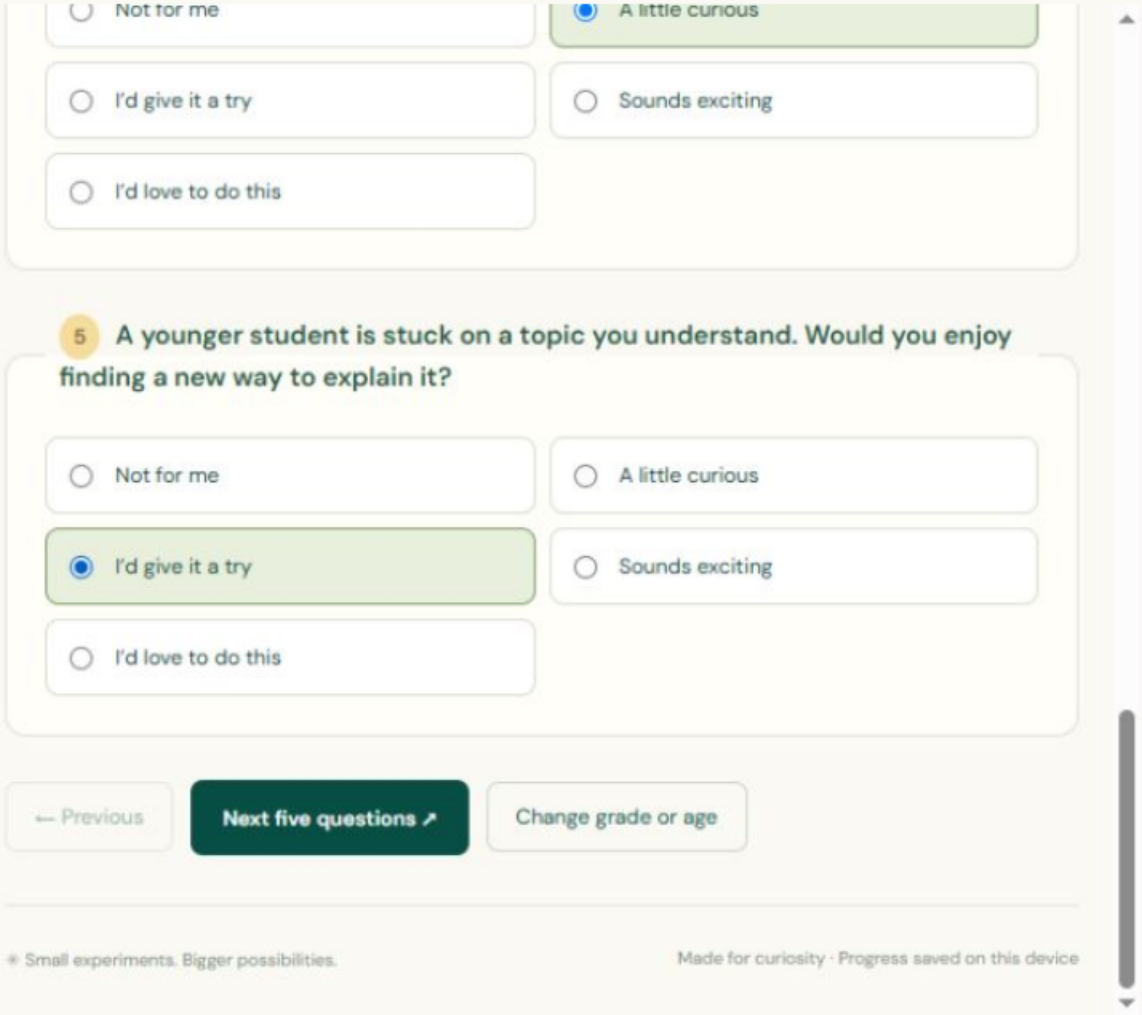

Move through the questions

1. Answer all five questions on the page.

2. Select Next five questions to continue.

3. Use Previous to revisit an earlier page.

The last page replaces Next with Discover my career directions.

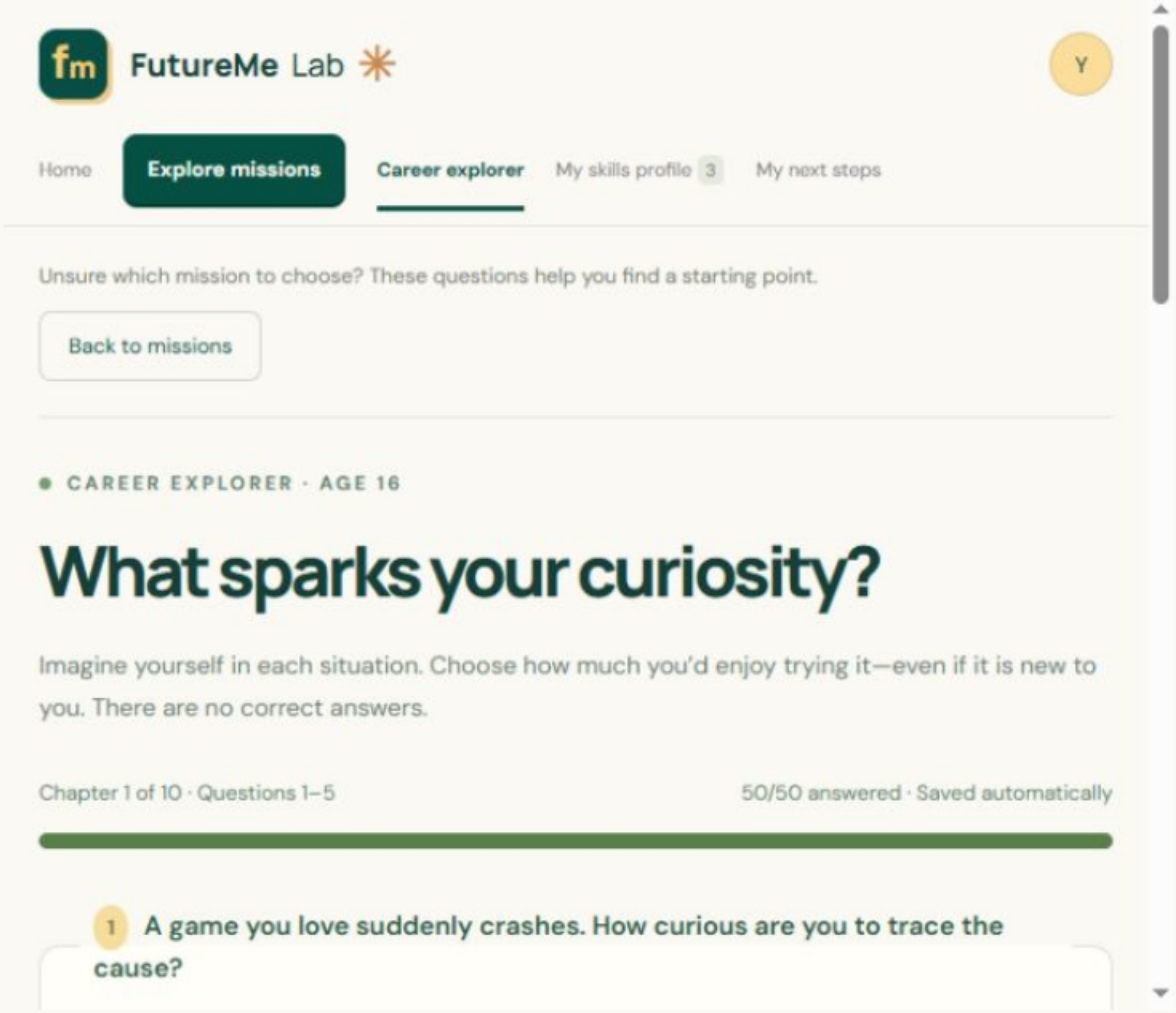

Pause, resume, or review answers

1. Your choices save automatically when browser storage is available.

2. Return using the same browser, device, and app address.

3. After results, select Review my answers to revise them.

After reviewing, continue through the pages to generate updated results.

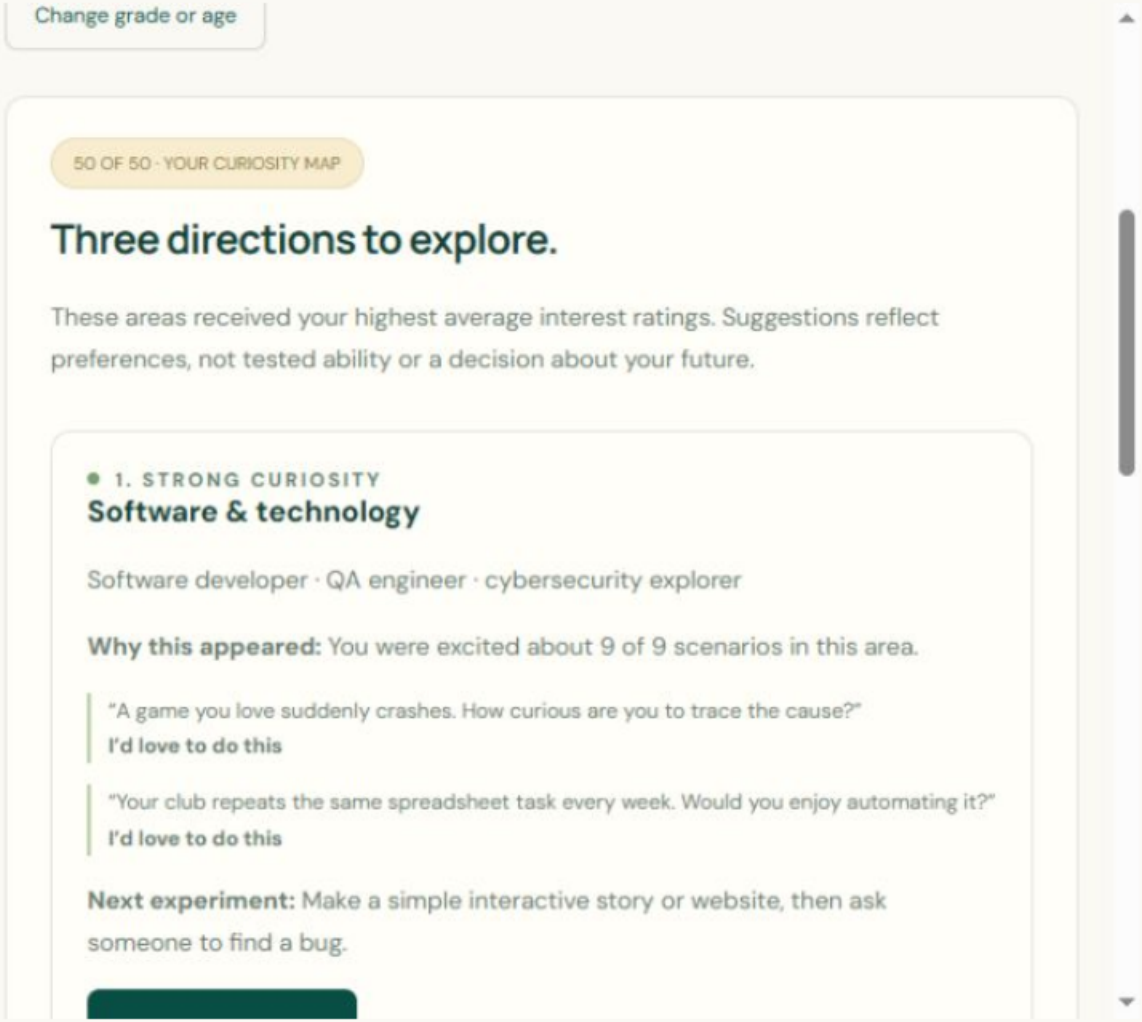

Read your suggested directions

1. Compare the three suggested interest areas.

2. Read Why this appeared and the supporting answers.

3. Choose a suggested small experiment or an eligible mission.

These suggestions describe preferences, not proven ability.

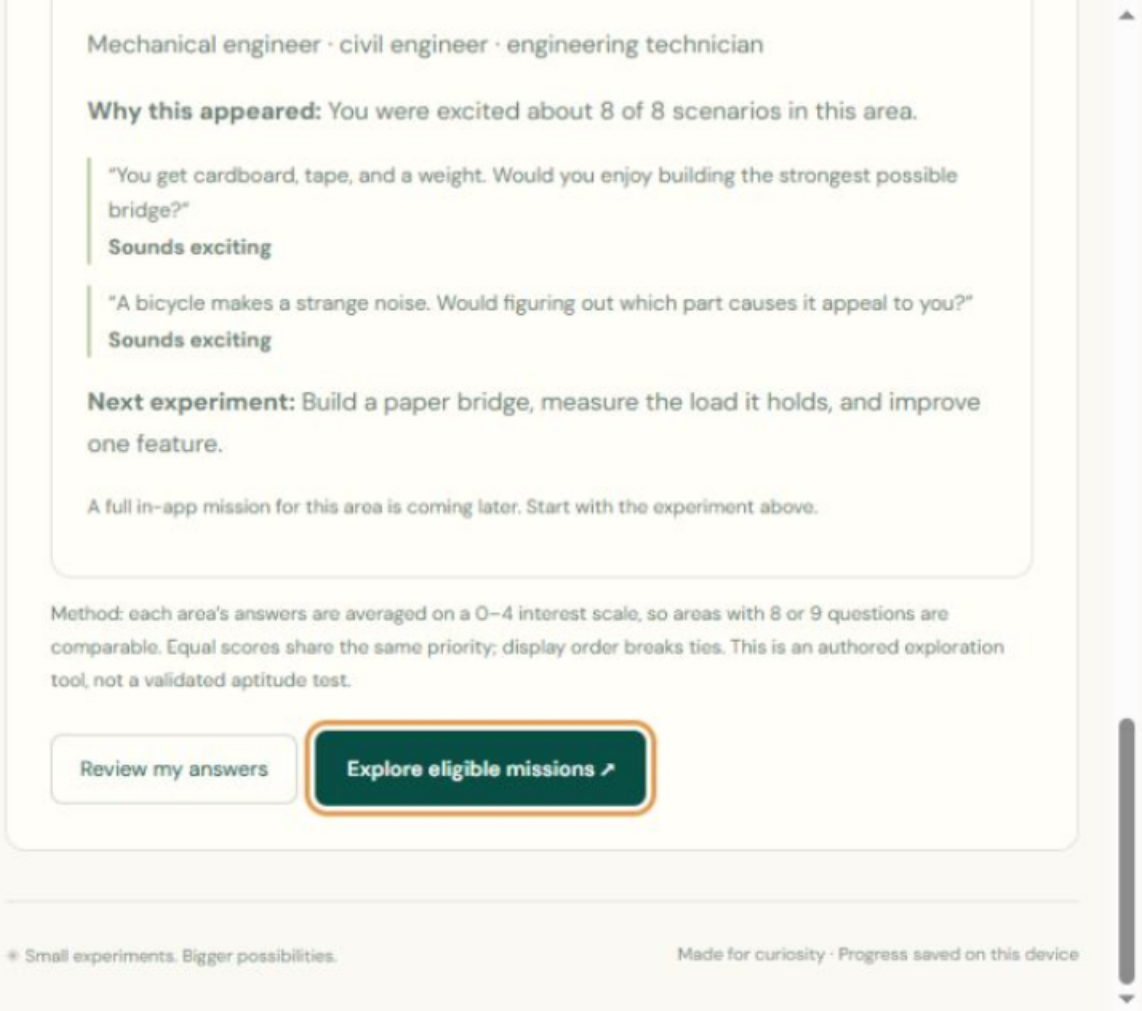

Choose your next action

1. Select Test it in a mission when available.

2. Use Review my answers to change responses.

3. Select Explore eligible missions to return to the career lab.

Some interest areas currently offer small experiments rather than full in-app missions.

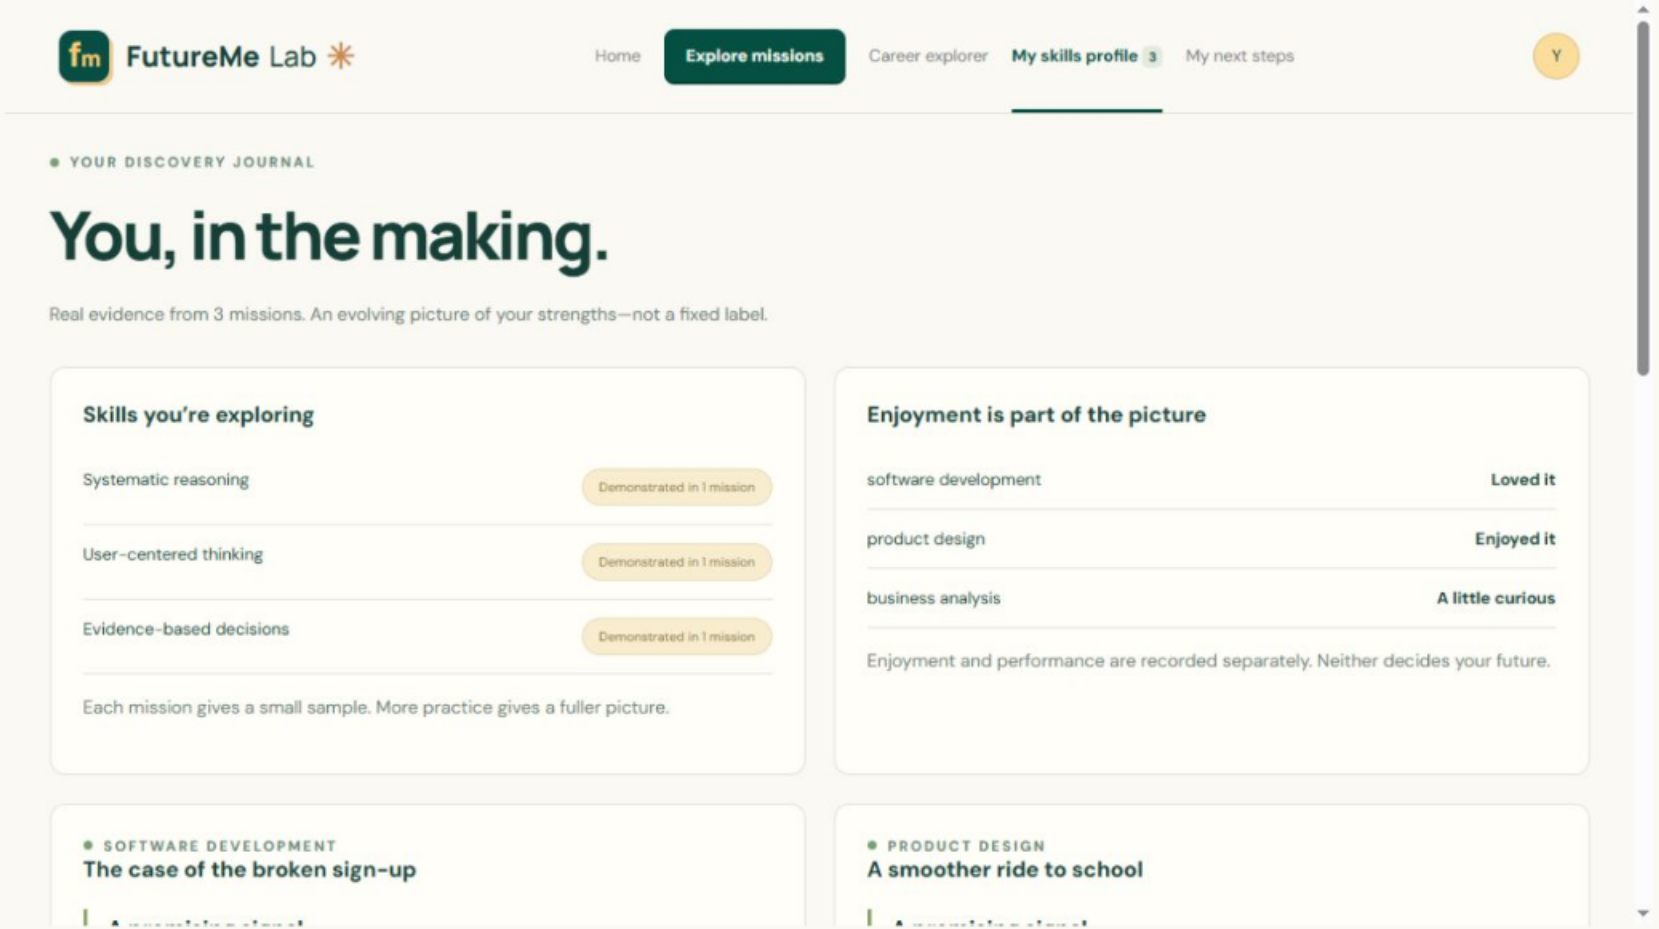

Review the skills overview

1. Select My skills profile in the top menu.

2. Read the early-evidence or demonstrated-skill labels.

3. Scroll down to see the mission details behind each signal.

The number in the navigation counts completed missions.

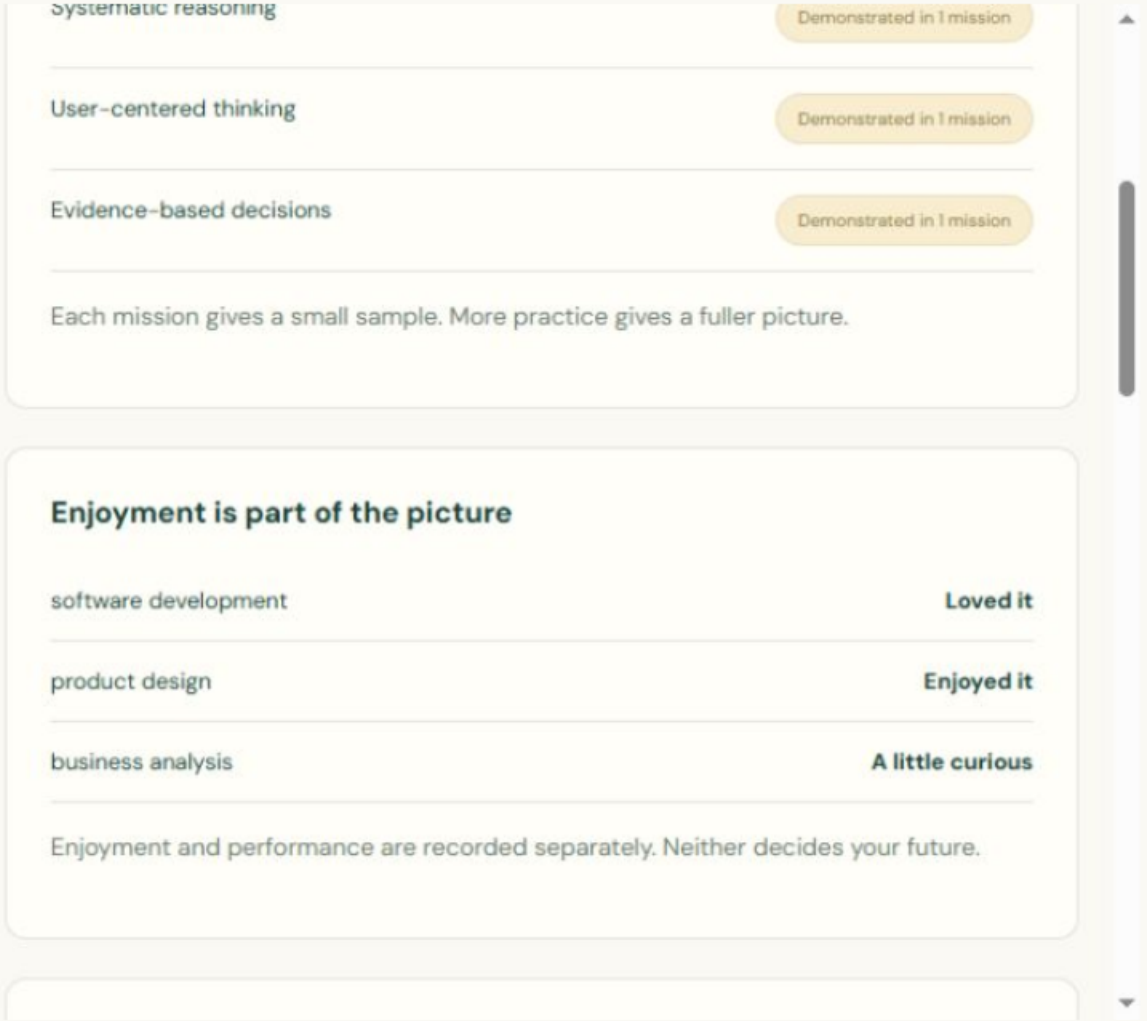

Compare enjoyment with performance

1. Find Enjoyment is part of the picture.

2. Compare your enjoyment ratings across the missions.

3. Notice work you would choose to do again.

You can enjoy something while still learning it, or perform well at work you do not enjoy.

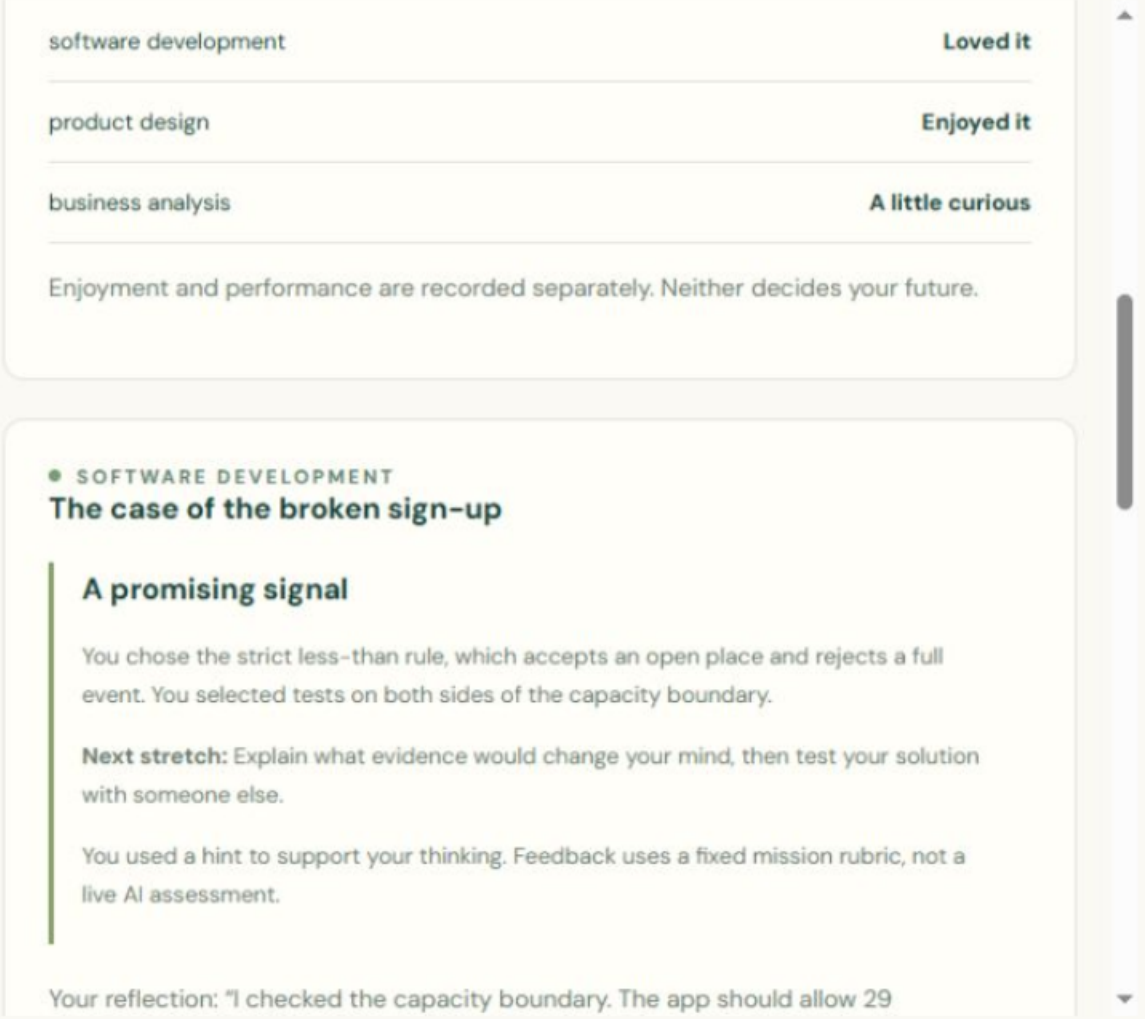

Revisit the supporting evidence

1. Read the mission choices and reflection.

2. Review your next-stretch suggestion.

3. Use Try again to repeat the experience.

A new submission replaces that mission's earlier saved result.

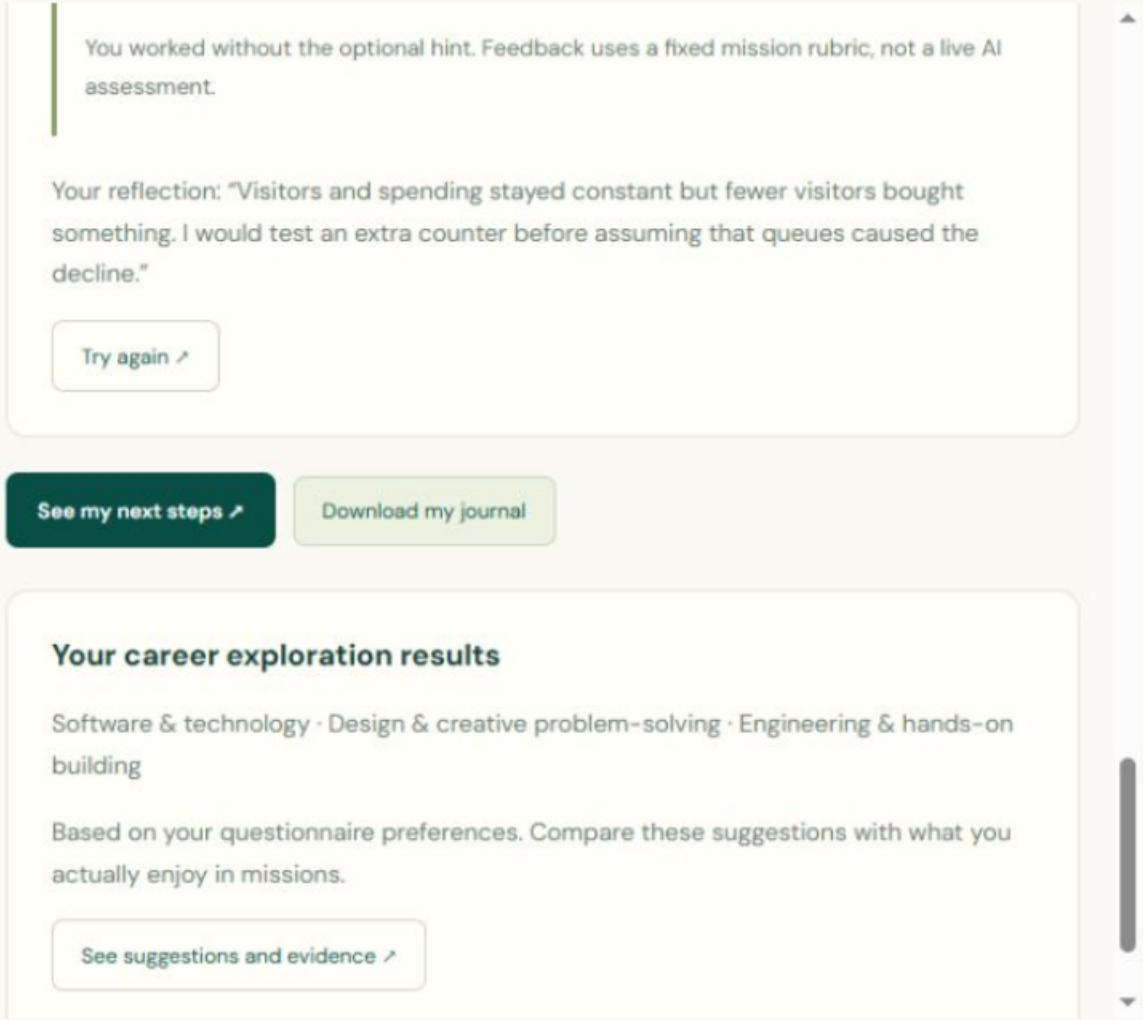

Download your discovery journal

1. Scroll to Download my journal.

2. Select it and check your browser’s Downloads folder.

3. Keep the text report for reflection or a career conversation.

The journal is a readable report. It does not restore app progress or export questionnaire answers.

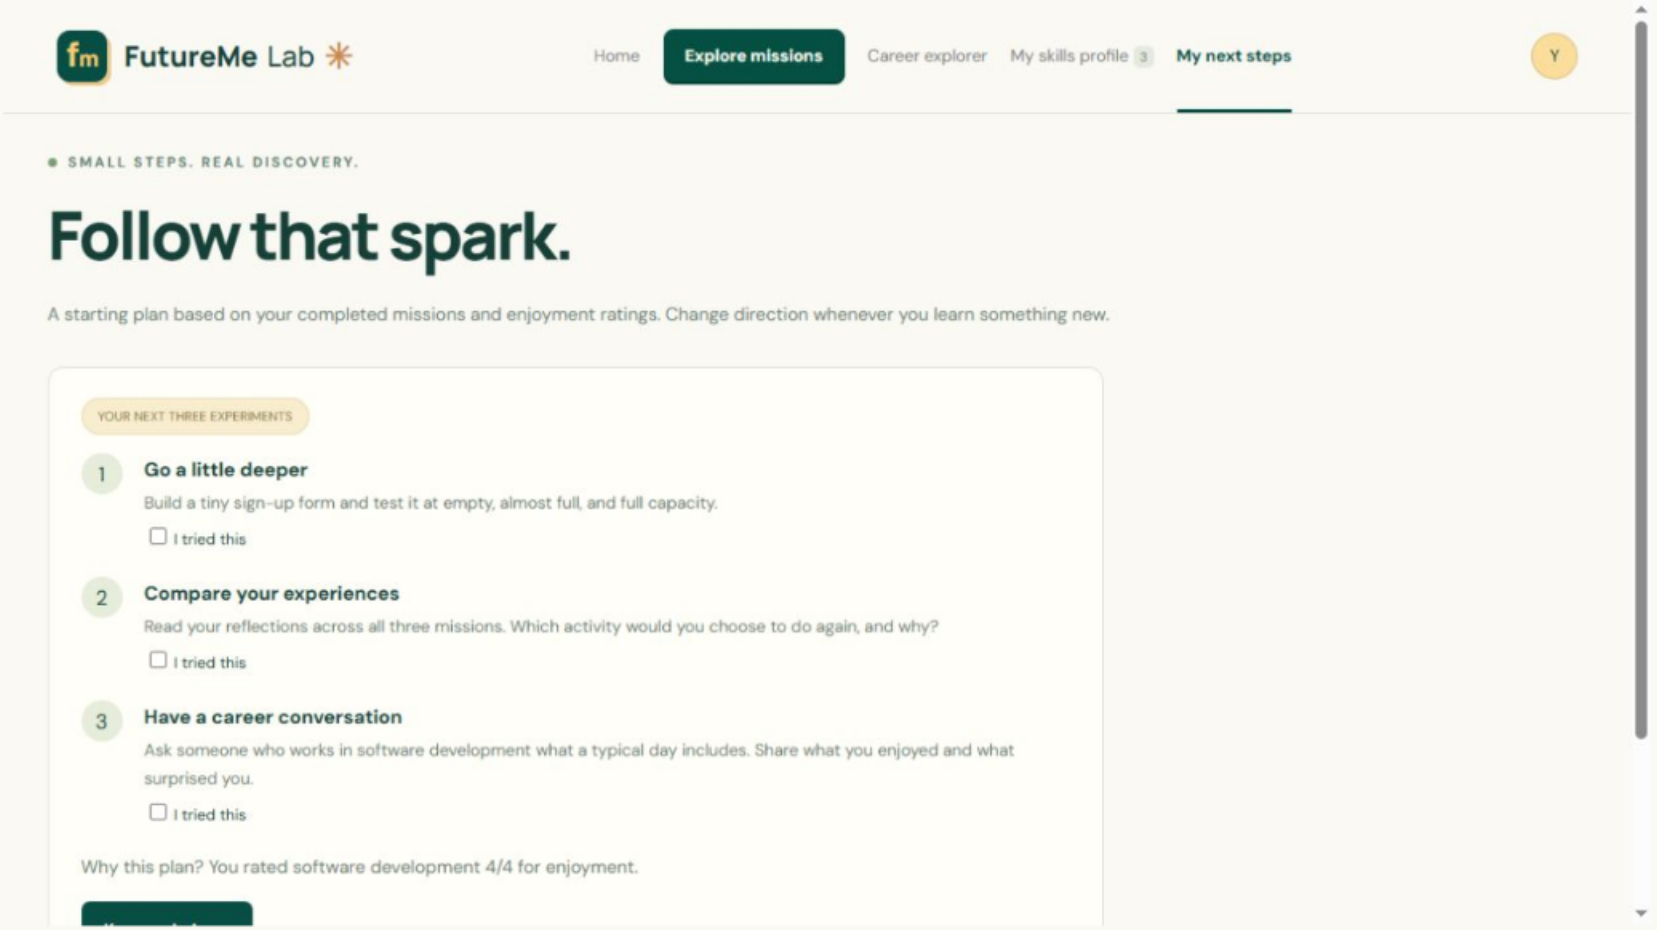

Follow your personal plan

1. Open My next steps.

2. Read the three suggested experiments.

3. Start with one small action outside the app.

The plan explains which mission and enjoyment rating influenced it.

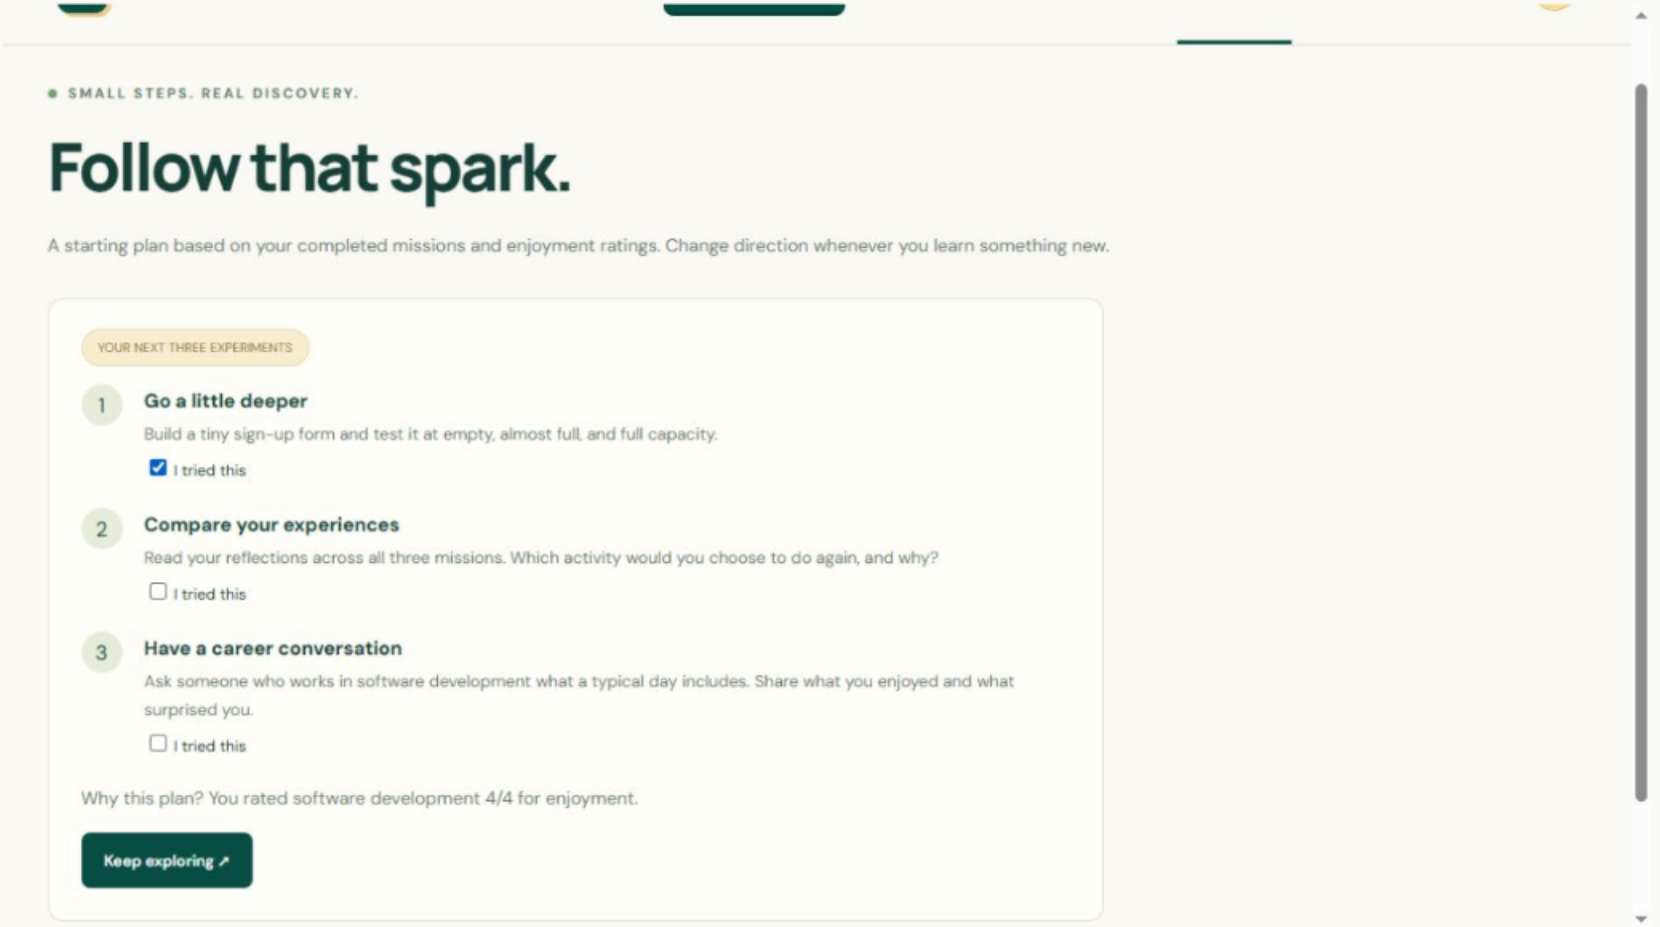

Track what you tried

1. Tick I tried this after an experiment.

2. Return later to track your progress.

3. Choose Keep exploring to try more work.

Checklist progress stays in this browser when storage is available.

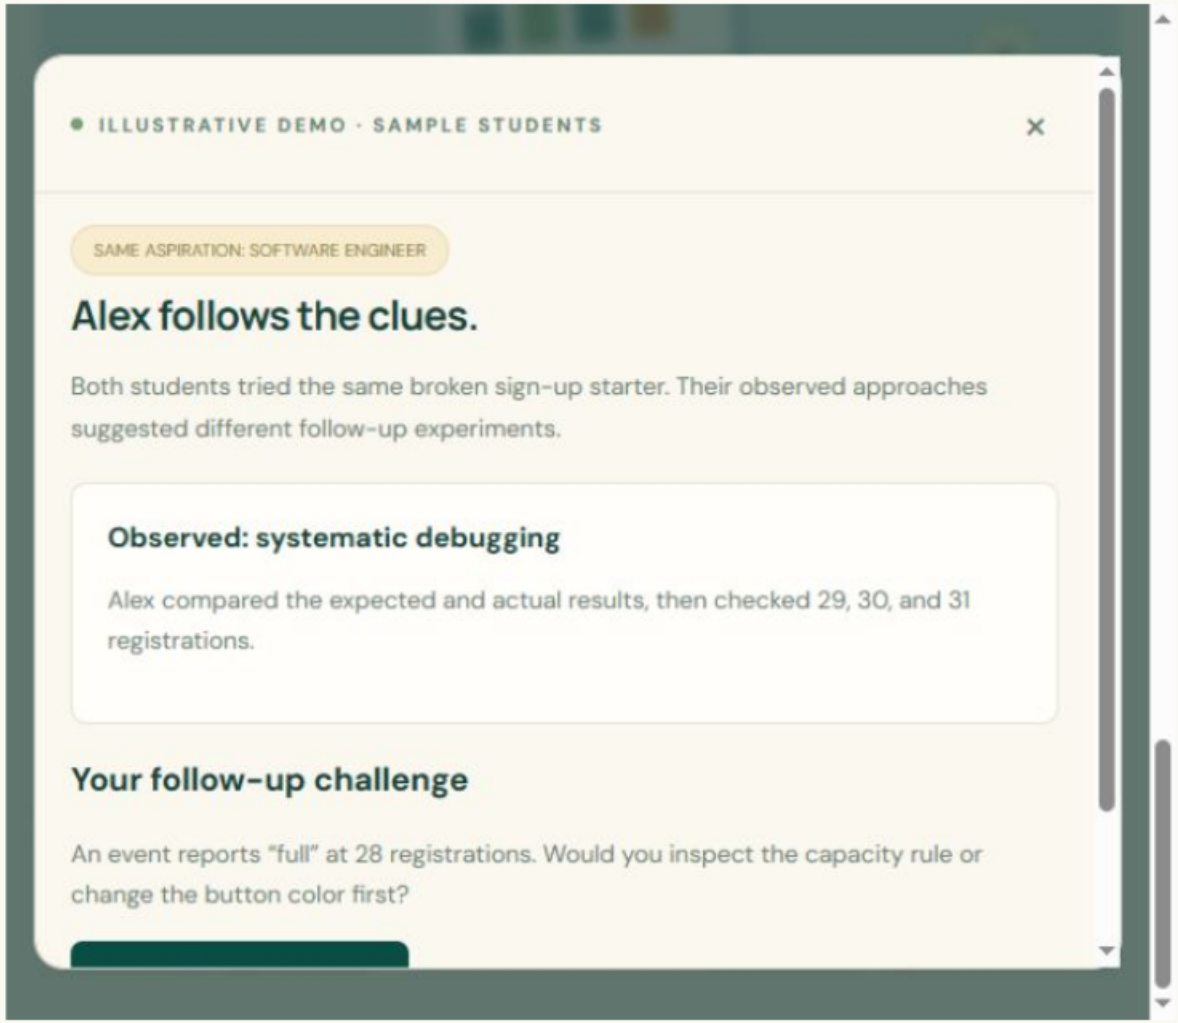

Meet Alex, the debugger

1. Open Explore missions and scroll to the demo links.

2. Select Meet Alex.

3. Read the sample evidence and choose the follow-up action.

Alex is an illustrative student, not a real assessment result.

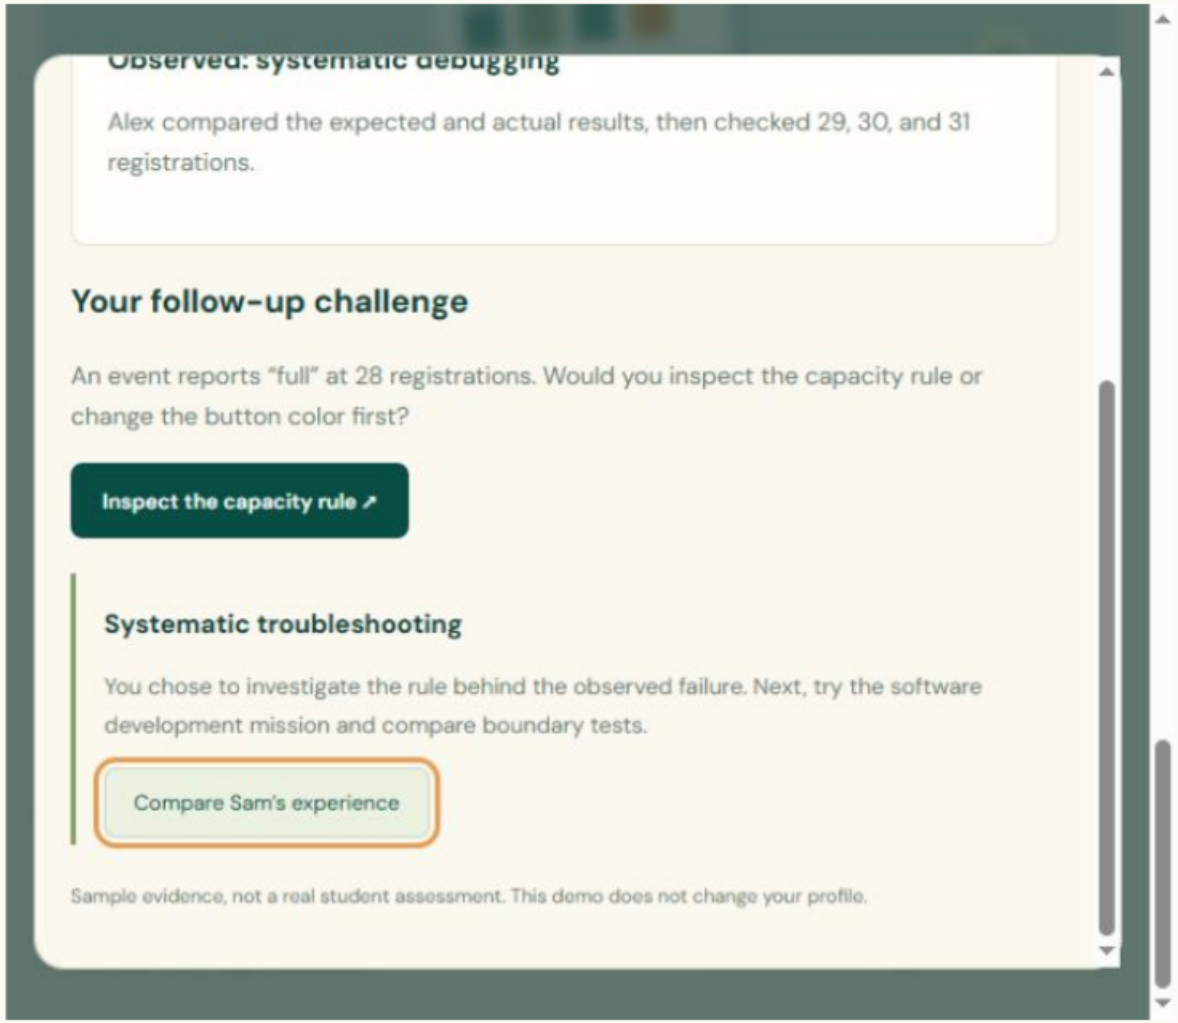

Compare the demo feedback

1. Read the observed approach and follow-up feedback.

2. Select Compare Sam's experience.

3. Notice how the suggested next experiment changes.

The sample demos do not change your own skills profile.

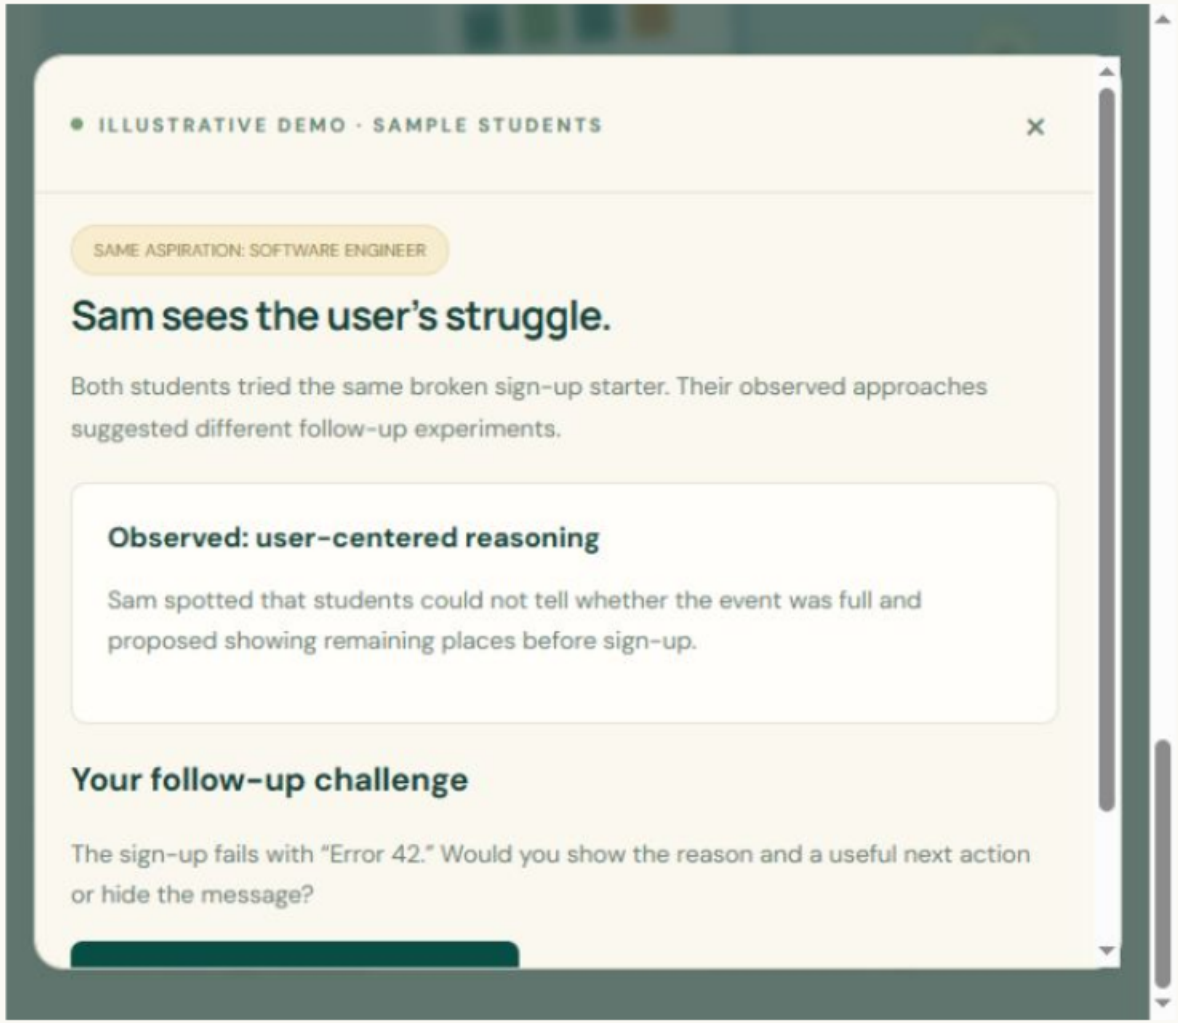

Meet Sam, the designer

1. Read Sam’s approach to the same starter problem.

2. Choose the clearer recovery message.

3. Compare this approach with Alex’s debugging process.

The same career ambition can lead to different useful experiments.

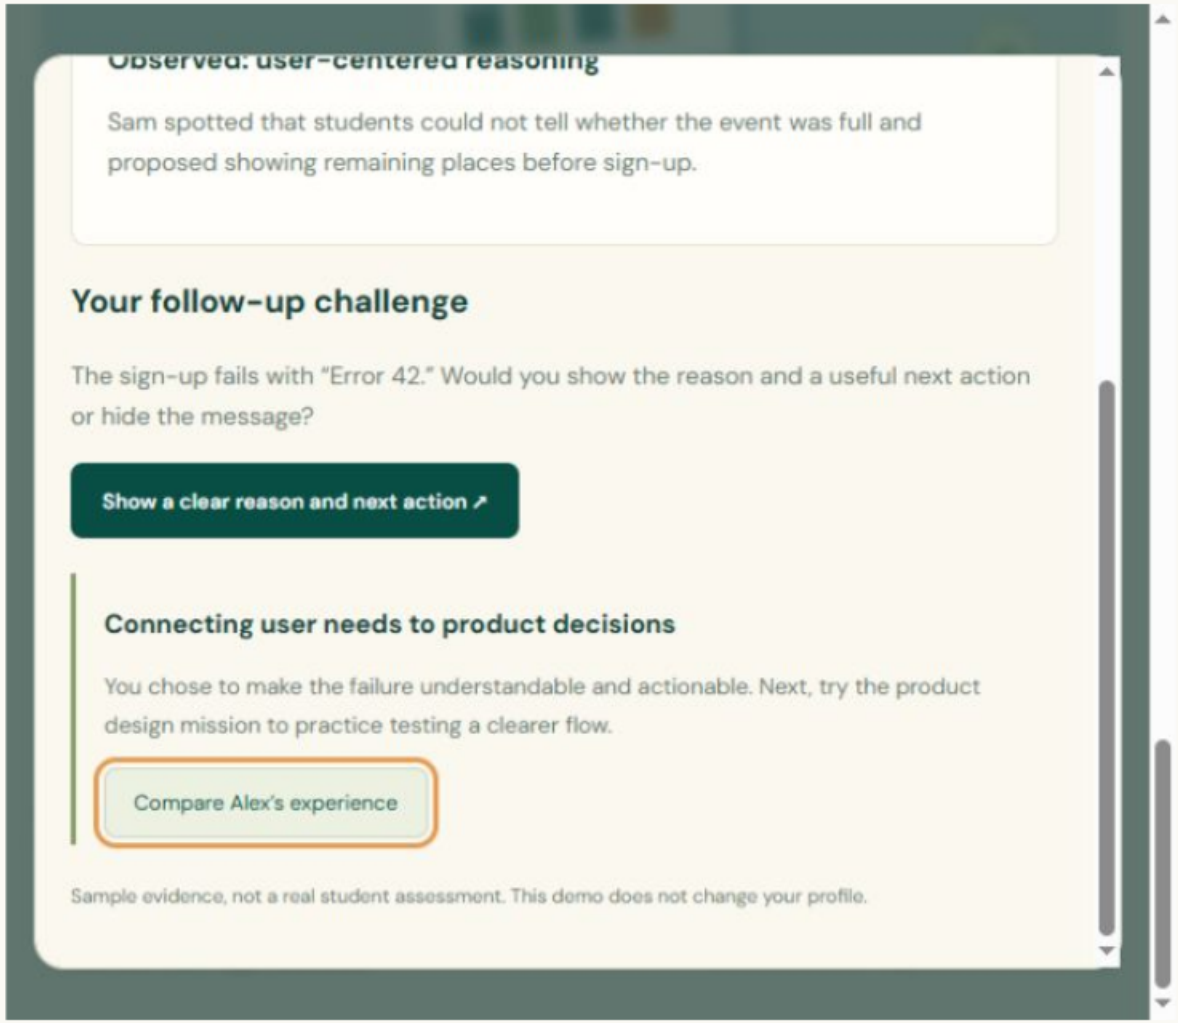

Return to your own exploration

1. Review Sam’s suggested next experiment.

2. Close the demo using the close button.

3. Return to your own mission, profile, or plan.

Use sample stories to understand the experience, then collect your own evidence.

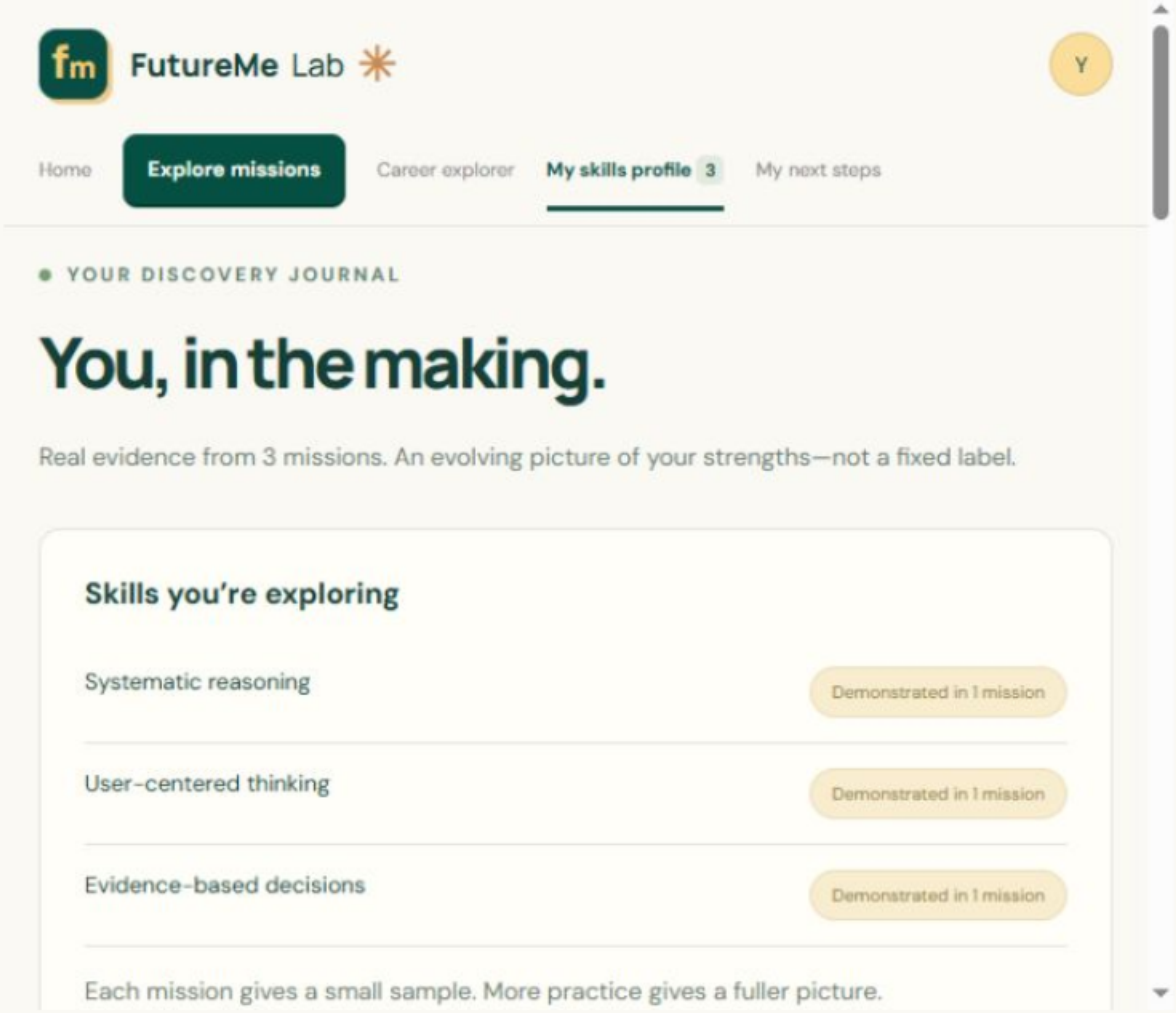

Keep your progress accessible

1. Return using the same device, browser profile, and app address.

2. Avoid private browsing if you want progress to persist.

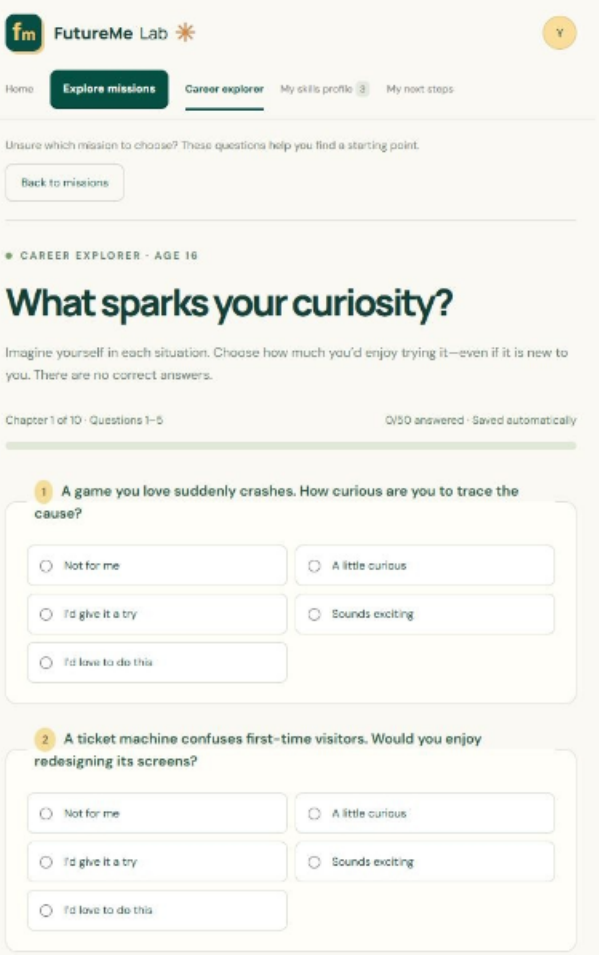

3. Use separate browser profiles for different students.

Clearing site data removes saved answers and results. There is no cloud sync in this MVP.
